RT "Cloning and characterisation of multiple acetyl-CoA carboxylase
RL transcripts in ovine adipose tissue.";
RL Gene 154:271-275(1995).
CC -!- FUNCTION: Catalyzes the rate-limiting reaction in the biogenesis
CC of long-chain fatty acids. This protein carries three functions:
CC biotin carboxyl carrier protein, biotin carboxylase, and
CC carboxyltransferase.
CC -!- CATALYTIC ACTIVITY: ATP + acetyl-CoA + HCO(3) (-) = ADP + phosphate
CC + malonyl-CoA.
CC -!- CATALYTIC ACTIVITY: ATP + biotin-carboxyl-carrier protein + CO(2)
CC = ADP + phosphate + carboxybiotin-carboxyl-carrier protein.
CC -!- COPACTOR: Biotin.
CC -!- ENZYME REGULATION: By phosphorylation (By similarity).
CC -!- PATHWAY: Long-chain fatty acid biosynthesis; first (rate-limiting)
CC step.
CC -!- SUBCELLULAR LOCATION: Cytoplasmic.
CC -!- SIMILARITY: Contains 1 ATP-grasp domain.
CC -!- SIMILARITY: Contains 1 biotin carboxylation domain.
CC -!- SIMILARITY: Contains 1 biotinyl-binding domain.
CC -!- SIMILARITY: Contains 1 carboxyltransferase domain.

CC This Swiss-Prot entry is copyright. It is produced through a collaboration
CC between the Swiss Institute of Bioinformatics and the EMBL outstation
CC the European Bioinformatics Institute. There are no restrictions on its
CC use as long as its content is in no way modified and this statement is not
CC removed.

OM protein - protein search, using sw model

Run on: May 12, 2006, 10:19:39 ; Search time 87.1795 Seconds
(without alignments)
60.479 Million cell updates/sec

Title: US-10-632-388-49
Perfect score: 78
Sequence: 1 CTLREWLHGGFC 12

Scoring table: BLOSUM62
Gapop 10.0 , Gapext 0.5

Searched: 2443163 seqs, 439378781 residues

Total number of hits satisfying chosen parameters: 2443163

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%
Maximum Match 100%
Listing first 1000 summaries

Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and autoimmune diseases.

Claim 19; Page 212; 608pp; English.

The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently 0 or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention

Activating thrombopoietin receptors in cells, used to treat thrombocytopenia and hematological disorders, comprises contacting cells with peptides and peptide mimetics attached to hydrophilic polymers.

Disclosure; Col 21; 128pp; English.

Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that bind to and activate the human thrombopoietin receptor (TPO-R). Methods of activating thrombopoietin receptors in cells comprise contacting the cells with effective amounts of peptides and peptide mimetics attached to hydrophilic polymers. The methods are used to treat thrombocytopenia such as that due to chemotherapy, radiation therapy or bone-marrow transplantation and to prevent thrombocytopenia in patients at risk. The sequences are used to treat and prevent haematological disorders including thrombocytopenia and platelet disorders. They are used in vitro as unique tools for understanding the biological role of thrombopoietin (TPO) and to develop other compounds that bind to and activate the TPO receptor. The peptides can be used to detect TPO receptors on living cells and fixed cells, in biological fluids, in tissue homogenates, and in purified or natural biological materials. They may also be used for in situ staining, fluorescence-activated cell sorting, Western blotting and enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can be used for in vitro expansion of megakaryocytes and their committed progenitors alone or in conjunction with additional cytokines

XX PT Novel vehicle-peptide molecule or its multimers useful for treating inflammatory and autoimmune diseases, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders and infertility.

XX PS Claim 39; Page 43; 176pp; English.

XX CC The present invention describes a vehicle-peptide molecule (I) or its multimers. (I) can have antiinflammatory, antitumour, immunosuppressive, cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological, antianaemic, anorectic, antiinfertility, haemostatic, dermatological and neuroprotective activities. (I) can be used as a therapeutic or prophylactic agent as well as for screening purposes. (I) is useful for diagnosing diseases characterised by dysfunction of their associated protein of interest, for identifying normal or abnormal proteins of interest, as a part of diagnostic kit to detect the presence of their proteins of interest in a biological sample. Additionally, (I) is useful for treating inflammatory and autoimmune diseases, tumour growth, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders, infertility, and neurological degenerative diseases. (I), comprising EPO-mimetic compounds are useful for treating disorders characterised by low red blood cell levels such as anaemia. The TPO-mimetic comprising compounds are useful for treating conditions that involve an existing megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic tumour which result in thrombocytopaenia, systemic lupus erythematosus, and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777 represent amino acid and nucleic acid sequences used in the exemplification of the present invention

XX PT New CDR mimetibody comprising a portion of a heavy or light chain variable region comprising human framework or ligand binding region, useful for preparing a composition for treating e.g., immune, cardiovascular or neurologic disease.

XX PS Disclosure; SEQ ID NO 484; 97pp; English.

XX CC This invention relates to novel mammalian CDR mimetibodies, specific portions or variants thereof. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, which itself comprises at least one human framework region and at least one ligand binding region (LBR). The present invention describes human mimetibodies, including modified immunoglobulins and cleavage products that can be useful in gene therapy and the generation of transgenic plants and animals. Furthermore, the CDR mimetibody is useful for preparing compositions for modulating, treating or reducing the symptoms of immune, cardiovascular, infectious, malignant and/ or neurologic diseases, as well as anaemia. Accordingly, they exhibit immunomodulator, cardiant, antimicrobial, cytostatic and neuroprotective activities. This peptide sequence is a TPO mimetic peptide sequence used to make a mimetibody of the invention.

The present sequence is a compound which binds to thrombopoietin (TPO) receptor (TR). It has a molecular weight of < 8000 Da, and a binding affinity to TR as expressed by an IC50 of no more than about 100 mum. The compound can be used for treating patients suffering from haematological disorders and thrombocytopenia resulting from chemotherapy, radiation therapy or bone marrow transfusions. The peptide may also be used to maintain the proliferation and growth of TPO-dependent cell lines and for use in biological research, for detecting TPO receptors on living cells. The present sequence is a specifically claimed example of a compound that is administered to a patient suffering from a disorder that is susceptible to treatment with a thrombopoietin agonist

XX Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
XX (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
XX independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
XX (L2)d-P2-(L3)e-P³, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
XX P3, and P4 = are each independently sequences of pharmacologically active
XX peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
XX c, d, e, and f = are each independently 0 or 1, provided that at least 1
XX of a and b is 1. The composition can have cytostatic, antiasthmatic,
XX thrombolytic and immunosuppressive activities. DNAs, vectors and host
XX cells from the present invention can be used for producing pharmaceutical
XX compositions. The compositions are useful for treating cancer, asthma,
XX thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
XX a Fab domain) can provide a longer half-life or incorporate functions
XX such as Fc receptor binding, protein A binding, complement fixation, and
XX possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
XX AAB18003 represent nucleotide and amino acid sequences used in the
XX exemplification of the present invention

PT Novel vehicle-peptide molecule or its multimers useful for treating
PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.
XX
XX
PS Claim 39; Page 44; 176pp; English.
XX
XX The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytosstatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777
CC represent amino acid and nucleic acid sequences used in the
CC exemplification of the present invention

XX
PT New CDR mimetibody comprising a portion of a heavy or light chain
PT variable region comprising human framework or ligand binding region,
PT useful for preparing a composition for treating e.g., immune,
PT cardiovascular or neurologic disease.
XX
XX PS Disclosure; SEQ ID NO 511; 97pp; English.
XX
XX This invention relates to novel mammalian CDR mimetibodies, specific
CC portions or variants thereof. Specifically, it refers to an antibody
CC fragment where a protein has been inserted into, or replaces a portion
CC of, one or more CDR regions, such that each CDR mimetibody comprises at
CC least one portion of a heavy chain or light chain variable region, which
CC itself comprises at least one human framework region and at least one
CC ligand binding region (LBR). The present invention describes human
CC mimetibodies, including modified immunoglobulins and cleavage products
CC that can be useful in gene therapy and the generation of transgenic
CC plants and animals. Furthermore, the CDR mimetibody is useful for
CC preparing compositions for modulating, treating or reducing the symptoms
CC of immune, cardiovascular, infectious, malignant and/ or neurologic
CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC peptide sequence is a TPO mimetic peptide sequence used to make a
CC mimetibody of the invention.

PT modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.
XX
XX Claim 2; SEQ ID NO 511; 129pp; English.
PS
XX This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiac, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

XX

CC The present sequence is a peptide which binds to thrombopoietin (TPO)

CC receptor (TR). The compound can be used for treating patients suffering

CC from haematological disorders and thrombocytopenia resulting from

CC chemotherapy, radiation therapy or bone marrow transfusions. The peptide

CC may also be used to maintain the proliferation and growth of TPO-

CC dependent cell lines and for use in biological research, for detecting

CC TPO receptors on living cells

XX Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and autoimmune diseases.
PT Claim 19; Page 212; 608pp; English.
XX The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently 0 or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention

XX Novel vehicle-peptide molecule or its multimers useful for treating
PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.
XX
PS Claim 39; Page 43; 176pp; English.
XX
CC The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet

CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777
CC represent amino acid and nucleic acid sequences used in the
CC exemplification of the present invention

XX New CDR mimetibody comprising a portion of a heavy or light chain
PT variable region comprising human framework or ligand binding region,
PT useful for preparing a composition for treating e.g., immune,
PT cardiovascular or neurologic disease.
XX
PS Disclosure; SEQ ID NO 485; 97pp; English.
XX
CC This invention relates to novel mammalian CDR mimetibodies, specific
CC portions or variants thereof. Specifically, it refers to an antibody
CC fragment where a protein has been inserted into, or replaces a portion
CC of, one or more CDR regions, such that each CDR mimetibody comprises at
CC least one portion of a heavy chain or light chain variable region, which
CC itself comprises at least one human framework region and at least one
CC ligand binding region (LBR). The present invention describes human
CC mimetibodies, including modified immunoglobulins and cleavage products
CC that can be useful in gene therapy and the generation of transgenic
CC plants and animals. Furthermore, the CDR mimetibody is useful for
CC preparing compositions for modulating, treating or reducing the symptoms
CC of immune, cardiovascular, infectious, malignant and/or neurologic
CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC peptide sequence is a TPO mimetic peptide sequence used to make a
CC mimetibody of the invention.

XX PT New CH1-deleted mimetibody polypeptides and nucleic acids, useful for
PT modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.

XX PS Claim 2; SEQ ID NO 485; 129pp; English.

XX CC This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

XX Activating thrombopoietin receptors in cells, used to treat
PT thrombocytopenia and hematological disorders, comprises contacting cells
PT with peptides and peptide mimetics attached to hydrophilic polymers.
XX
PS Disclosure; Col 22; 128pp; English.
XX
CC Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that
CC bind to and activate the human thrombopoietin receptor (TPO-R). Methods
CC of activating thrombopoietin receptors in cells comprise contacting the
CC cells with effective amounts of peptides and peptide mimetics attached to
CC hydrophilic polymers. The methods are used to treat thrombocytopenia such
CC as that due to chemotherapy, radiation therapy or bone-marrow
CC transplantation and to prevent thrombocytopenia in patients at risk. The
CC sequences are used to treat and prevent haematological disorders
CC including thrombocytopenia and platelet disorders. They are used in vitro
CC as unique tools for understanding the biological role of thrombopoietin
CC (TPO) and to develop other compounds that bind to and activate the TPO
CC receptor. The peptides can be used to detect TPO receptors on living
CC cells and fixed cells, in biological fluids, in tissue homogenates, and
CC in purified or natural biological materials. They may also be used for in
CC situ staining, fluorescence-activated cell sorting, Western blotting and
CC enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can
CC be used for in vitro expansion of megakaryocytes and their committed
CC progenitors alone or in conjunction with additional cytokines

PT Novel composition of matter comprising an Fc domain and pharmacologically

PT active peptides, useful for treating cancer and autoimmune diseases.
XX
PS Claim 19; Page 214; 608pp; English.
XX
CC The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

XX Novel vehicle-peptide molecule or its multimers useful for treating
PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.
XX
PS Claim 39; Page 43; 176pp; English.
XX
CC The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antirheumatic, antiarthritis, antidiabetic, ophthalmological,
CC anianaemic, anorectic, antinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777
CC represent amino acid and nucleic acid sequences used in the
CC exemplification of the present invention

DR New CHI-deleted mimetibody polypeptides and nucleic acids, useful for
XX modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.
XX
XX Claim 2; SEQ ID NO 493; 129pp; English.
PS
XX This invention relates to CHI deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CHI-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

PS

XX Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that
CC bind to and activate the human thrombopoietin receptor (TPO-R). Methods
CC of activating thrombopoietin receptors in cells comprise contacting the
CC cells with effective amounts of peptides and peptide mimetics attached to
CC hydrophilic polymers. The methods are used to treat thrombocytopenia such
CC as that due to chemotherapy, radiation therapy or bone-marrow
CC transplantation and to prevent thrombocytopenia in patients at risk. The
CC sequences are used to treat and prevent haematological disorders
CC including thrombocytopenia and platelet disorders. They are used in vitro
CC as unique tools for understanding the biological role of thrombopoietin
CC (TPO) and to develop other compounds that bind to and activate the TPO
CC receptor. The peptides can be used to detect TPO receptors on living
CC cells and fixed cells, in biological fluids, in tissue homogenates, and
CC in purified or natural biological materials. They may also be used for in
CC situ staining, fluorescence-activated cell sorting, Western blotting and
CC enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can
CC be used for in vitro expansion of megakaryocytes and their committed
CC progenitors alone or in conjunction with additional cytokines

Thrombopoietin receptor-binding/activating peptide(s) and peptide
mimetic(s) - useful in treatment of haematological disorders, esp.
thrombocytopenia resulting from chemotherapy, etc.

Disclosure; Page 27; 106pp; English.

The present sequence is a peptide which binds to thrombopoietin (TPO)

CC receptor (TR). The compound can be used for treating patients suffering
CC from haematological disorders and thrombocytopenia resulting from
CC chemotherapy, radiation therapy or bone marrow transfusions. The peptide
CC may also be used to maintain the proliferation and growth of TPO-
CC dependent cell lines and for use in biological research, for detecting
CC TPO receptors on living cells

Peptides and peptide mimetics which bind to and activate the
thrombopoietin receptor - useful in treatment of haematological
disorders, esp. thrombocytopenia resulting from chemotherapy, etc.

Disclosure; Page 27; 106pp; English.

The present peptide, which binds the thrombopoietin receptor (TR), can be
used to treat disorders which are susceptible to treatment with a
thrombopoietin agonist, preferably haematological disorders and
thrombocytopenia resulting from chemotherapy, radiation therapy or bone
marrow transfusions. It can also be used diagnostically, e.g. to
investigate the mechanism of thrombopoietin signal transduction and
receptor activation, or to maintain the proliferation and growth of
thrombopoietin dependent cell lines

PT	Novel composition of matter comprising an Fc domain and pharmacologically				
PT	active peptides, useful for treating cancer and autoimmune diseases.				
XX					
PS	Claim 19; Page 211; 608pp; English.				
XX					
CC	The present invention describes composition of matter (I) comprising an				
CC	Fc domain, pharmacologically active peptides, and linkers. Where (I) is:				
CC	(X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each				
CC	independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-				
CC	(L2)d-P2-(L3)e-P ³ , or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,				
CC	P3, and P4 = are each independently sequences of pharmacologically active				
CC	peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,				
CC	c, d, e, and f = are each independently 0 or 1, provided that at least 1				
CC	of a and b is 1. The composition can have cytostatic, antiasthmatic,				
CC	thrombolytic and immunosuppressive activities. DNAs, vectors and host				
CC	cells from the present invention can be used for producing pharmaceutical				
CC	compositions. The compositions are useful for treating cancer, asthma,				
CC	thrombosis, or autoimmune diseases. The use of an Fc domain (rather than				
CC	a Fab domain) can provide a longer half-life or incorporate functions				
CC	such as Fc receptor binding, protein A binding, complement fixation, and				
CC	possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to				
CC	AAB18003 represent nucleotide and amino acid sequences used in the				
CC	exemplification of the present invention

PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.
XX
PS Claim 39; Page 43; 176pp; English.
XX
CC The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antirheumatic, antiarthritis, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

PT cardiovascular or neurologic disease.
XX
PS Disclosure; SEQ ID NO 481; 97pp; English.
XX
CC This invention relates to novel mammalian CDR mimetibodies, specific
CC portions or variants thereof. Specifically, it refers to an antibody
CC fragment where a protein has been inserted into, or replaces a portion
CC of, one or more CDR regions, such that each CDR mimetibody comprises at
CC least one portion of a heavy chain or light chain variable region, which
CC itself comprises at least one human framework region and at least one
CC ligand binding region (LBR). The present invention describes human
CC mimetibodies, including modified immunoglobulins and cleavage products
CC that can be useful in gene therapy and the generation of transgenic
CC plants and animals. Furthermore, the CDR mimetibody is useful for
CC preparing compositions for modulating, treating or reducing the symptoms
CC of immune, cardiovascular, infectious, malignant and/ or neurologic
CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC peptide sequence is a TPO mimetic peptide sequence used to make a
CC mimetibody of the invention.

XX			
CC	The present sequence is a peptide which binds to thrombopoietin (TPO)		
CC	receptor (TR). The compound can be used for treating patients suffering		
CC	from haematological disorders and thrombocytopenia resulting from		
CC	chemotherapy, radiation therapy or bone marrow transfusions. The peptide		
CC	may also be used to maintain the proliferation and growth of TPO-		
CC	dependent cell lines and for use in biological research, for detecting		
CC	TPO receptors on living cells

4: PIR4.*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

A;Title: The whole structure of the 13-subunit oxidized cytochrome c oxidase at 2.8 angstroms
A;Reference number: A57981; MUID:96216288; PMID:8638158
A;Contents: annotation; X-ray crystallography, 2.8 angstroms
C;Comment: This form is expressed in fetal and adult cardiac and skeletal muscle.
C;Genetics:
A;Gene: COX6A1
A;Introns: 25/1; 70/3

C;Complex: part of a 13 chain complex spanning the inner mitochondrial membrane and consists of two subunits, Vb (see PIR:OGB06A), V1a, V1b (see PIR:OGB07), V1c (see PIR:OGB06C), V11a (see PIR:OGB07) and V11b (see PIR:OGB07).
C;Function:
A;Description: the cytochrome-c oxidase complex catalyzes the oxidation of four molecules of reduced cytochrome c to oxidized cytochrome c, producing two molecules of water and lowering the concentration of cytochrome c.
A;Pathway: oxidative phosphorylation; respiratory chain
A;Note: the role of chain V1a is not clear
C;Superfamily: cytochrome-c oxidase, subunit V1a
C;Keywords: cardiac muscle; electron transfer; heart; membrane-associated complex; mitochondrial protein
F;1-12/Domain: transit peptide (mitochondrion) #status predicted <TNP>
F;13-96/Product: cytochrome-c oxidase chain V1a, cardiac #status experimental <MAT>

Database : UniProt_05.80:*
1: uniprot_sprot:*
2: uniprot_trembl:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT "X-ray structure of azide-bound fully oxidized cytochrome c oxidase from bovine heart at 2.9 A resolution.";
RL Acta Crystallogr. D 56:529-535(2000).
CC -!- FUNCTION: This protein is one of the nuclear-coded polypeptide chains of cytochrome c oxidase, the terminal oxidase in mitochondrial electron transport.
CC -!- CATALYTIC ACTIVITY: 4 ferrocytochrome c + O(2) = 4 ferricytochrome c + 2 H(2)O.
CC -!- SUBCELLULAR LOCATION: Mitochondrial inner membrane.
CC -!- TISSUE SPECIFICITY: Heart/muscle specific isoform.
CC -!- SIMILARITY: Belongs to the cytochrome c oxidase Via family.
CC -----
CC This Swiss-Prot entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. There are no restrictions on its use as long as its content is in no way modified and this statement is not removed.

CC -!- FUNCTION: Involved in degradation of small peptides. Digests

CC preferentially peptides containing an aliphatic or hydrophobic

CC residue in P1' position, as well as methionine, leucine or

CC phenylalanine in P1 position of ester substrate.

CC -!- CATALYTIC ACTIVITY: Release of a C-terminal amino acid with broad

CC specificity.

CC -!- ENZYME REGULATION: Inhibited by ZPCK.

CC -!- SUBCELLULAR LOCATION: Lysosome-like vacuoles.

CC -!- PTM: Enters the endoplasmic reticulum as an inactive zymogen and

CC is modified by four N-linked core oligosaccharides, giving rise to

CC a precursor known as P1 (67 kDa). As P1 transits through the

CC Golgi, extension of its core oligosaccharides leads to the Golgi-

CC modified P2 precursor (69 kDa). P2 is sorted away from secretory

CC proteins at or beyond a late Golgi compartment and is subsequently

CC delivered to the vacuole via a prevacuolar endosome-like

CC compartment. Upon arrival in the vacuole, the N-terminal

CC prosegment of P2 is cleaved to yield the enzymatically active

CC mature vacuolar form of CPY (61 kDa).

CC -!- SIMILARITY: Belongs to the peptidase S10 family.

CC -!- DATABASE: NAME=Worthington enzyme manual;

CC WWW="http://www.worthington-biochem.com/COY/".

CC This Swiss-Prot entry is copyright. It is produced through a collaboration

CC between the Swiss Institute of Bioinformatics and the EMBL outstation -

CC the European Bioinformatics Institute. There are no restrictions on its

CC use as long as its content is in no way modified and this statement is not

CC removed.

CC -!- FUNCTION: Reverses the normal flow of glycerolipid biosynthesis by
CC phosphorylating diacylglycerol back to phosphatidic acid.
CC -!- CATALYTIC ACTIVITY: ATP + 1,2-diacylglycerol = ADP + 1,2-diacyl-
CC sn-glycerol 3-phosphate.
CC -!- ENZYME REGULATION: Requires phosphatidylserine for maximal
CC activity.
CC -!- SUBCELLULAR LOCATION: Cytoplasmic. Can be loosely bound to the
CC membranes.

CC IsoId=P49619-2; Sequence=VSP_001267;
CC Note=May be inactive;
CC -!- TISSUE SPECIFICITY: Predominantly expressed in retina and in a
CC much lesser extent in the brain. Other tissues contain extremely
CC low levels of DGK-gamma.
CC -!- SIMILARITY: Belongs to the eukaryotic diacylglycerol kinase
CC family.
CC -!- SIMILARITY: Contains 2 EF-hand domains.
CC -!- SIMILARITY: Contains 2 phorbol-ester/DAG-type zinc fingers.

9: Geneseqp2005s:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

SUMMARIES

CC The present sequence is a peptide which binds to thrombopoietin (TPO)
CC receptor (TR). The compound can be used for treating patients suffering
CC from haematological disorders and thrombocytopenia resulting from
CC chemotherapy, radiation therapy or bone marrow transfusions. The peptide
CC may also be used to maintain the proliferation and growth of TPO-
CC dependent cell lines and for use in biological research, for detecting
CC TPO receptors on living cells

PT Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX
PS Claim 19; Page 213; 608pp; English.
XX
CC The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

PT Activating thrombopoietin receptors in cells, used to treat
PT thrombocytopenia and hematological disorders, comprises contacting cells
PT with peptides and peptide mimetics attached to hydrophilic polymers.
XX
PS Disclosure; Col 21; 128pp; English.
XX
CC Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that
CC bind to and activate the human thrombopoietin receptor (TPO-R). Methods
CC of activating thrombopoietin receptors in cells comprise contacting the
CC cells with effective amounts of peptides and peptide mimetics attached to
CC hydrophilic polymers. The methods are used to treat thrombocytopenia such
CC as that due to chemotherapy, radiation therapy or bone-marrow
CC transplantation and to prevent thrombocytopenia in patients at risk.The
CC sequences are used to treat and prevent haematological disorders
CC including thrombocytopenia and platelet disorders. They are used in vitro
CC as unique tools for understanding the biological role of thrombopoietin
CC (TPO) and to develop other compounds that bind to and activate the TPO
CC receptor. The peptides can be used to detect TPO receptors on living
CC cells and fixed cells, in biological fluids, in tissue homogenates, and
CC in purified or natural biological materials. They may also be used for in
CC situ staining, fluorescence-activated cell sorting, Western blotting and
CC enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can
CC be used for in vitro expansion of megakaryocytes and their committed
CC progenitors alone or in conjunction with additional cytokines

XX	New CH1-deleted mimetibody polypeptides and nucleic acids, useful for modulating, treating, alleviating, preventing an immune, cardiovascular, or neurodegenerative disease or disorder, anemia, cancer, or infectious diseases.		
PS	Claim 2; SEQ ID NO 488; 129pp; English.		
XX			
CC	This invention relates to CH1 deleted mimetibodies (and the DNA sequences which encode them), compositions, methods and uses. The invention may be useful for the development of compounds with an immunosuppressive, cardiovascular, cardiant, hypotensive, neuroprotective, nootropic, antibacterial, virucide or fungicide activity. In addition, the disclosed sequences may prove useful for gene therapy. The CH1-deleted mimetibody is useful for diagnosing or treating a disease condition in a cell, tissue, organ or animal, specifically for modulating, treating, alleviating, preventing the incidence or reducing the symptoms of an immune, cardiovascular (for example arrhythmia, hypertension or heart failure), or neurodegenerative (for example multiple sclerosis, dementia or Alzheimer's disease) diseases or disorders, anaemia, cancerous conditions, or infectious diseases (for example bacterial, viral or fungal infection). The present sequence is that of a peptide which may be used during the creation of a mimetibody of the invention.

CC	This invention relates to CH1 deleted mimetibodies (and the DNA sequences which encode them), compositions, methods and uses. The invention may be useful for the development of compounds with an osteopathic, cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen, gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haemostatic, immunomodulator, antiallergic, muscular-Gen, cytostatic, antiinflammatory, neuroleptic, ophthalmological, nephrotropic or respiratory-Gen activity acting as a tumour necrosis factor (TNF)-modulator or cytokine-agonist. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CH1 deleted mimetibody, such as a bone or joint, cardiovascular, dental or oral, dermatological, ear, nose or throat, endocrine, metabolic, gastrointestinal, gynaecological, hepatic, obstetric, haematologic, immunological, allergic, infectious, musculoskeletal, oncological, neurological, nutritional, ophthalmologic, pediatric, psychiatric, renal or pulmonary disorders. The present sequence is that of a peptide which may be used during the creation of a mimetibody of the invention.

CC	This represents the amino acid sequence of the Dead Box Y (DBY) gene									
CC	product. The invention relates to genes occurring on the non-recombining									
CC	region of the human Y chromosome. The sequences fall into two classes:									
CC	(1) X-homologous DNA which are expressed in many organs, having									
CC	functional X homologues and (2) testis-specific DNA sequences. Y									
CC	chromosomal DNA from males with known conditions such as infertility and									
CC	reduced sperm count can be assessed using the invention to determine									
CC	whether the condition is associated with or caused by the occurrence of									
CC	the gene or gene alteration. Candidate inhibitors of the enzymatic									
CC	activity of the genes can be assessed using in vitro assays

PT	Identifying modulators of the p53 pathway for use in treating apoptotic									
PT	or cell proliferation disorders, comprises screening for agents that									
PT	modulate activity of a human ortholog of genes that modify the p53									
PT	pathway in Drosophila.									
XX										
PS	Example 2; Page 567-569; 678pp; English.									
XX										
CC	The invention relates to identifying (M1) a candidate p53 pathway									
CC	modulating agent, by contacting an assay system comprising a purified HM									
CC	polypeptide (human orthologue of genes that modify the p53 pathway in									
CC	Drosophila) or nucleic acid with a test agent under conditions, where but									
CC	for the presence of the test agent, the system provides a reference									
CC	activity, and detecting a test agent-biased activity of the assay system.									
CC	Also included are modulating (M2) a p53 pathway of a cell (comprising									
CC	contacting a cell defective in p53 function with a candidate modulator									
CC	that specifically binds to a HM polypeptide comprising an HM amino acid									
CC	sequence, where p53 function is restored), modulating (M3) a p53 pathway									
CC	in a mammalian cell (comprising contacting the cell with an agent that									
CC	specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4)									
CC	a disease in a patient (comprising: (a) obtaining a biological sample									
CC	from the patient; (b) contacting the sample with a probe for HM									
CC	expression; (c) comparing the results with a control; and (d) determining									
CC	whether the comparison indicates a likelihood disease). (M1) is useful									
CC	for identifying modulators of the p53 pathway. A probe for HM expression									
CC	is useful for diagnosing breast, colon, kidney, lung and ovarian cancer,									
CC	in a patient, where the cancer has greater than 25 % expression level.									
CC	Modulators identified by (M1) are useful in a variety of diagnostic and									
CC	therapeutic applications, where disease or disorder prognosis is related									
CC	to defects in the p53 pathway, such as, angiogenesis, apoptotic or cell									
CC	proliferation disorders (e.g. cancer). Another two new methods (M2 and									
CC	M3) are useful for modulating the p53 pathway of a cell, thus restoring									
CC	the p53 function of the cell, so that the cell undergoes normal									
CC	proliferation or progression through the cell cycle. (M2) and (M3) are									
CC	also useful for treating defects in the p53 pathway such as angiogenic,									
CC	apoptotic or cell proliferation disorders. The present sequence									
CC	represents a human p53 pathway modifying protein

PT Combination useful for preparing a composition for treating liver
PT disorders associated with steroid therapy, e.g., cirrhosis or hepatitis,
PT comprises cDNAs that are differentially expressed in response to steroid
PT treatment.
XX
PS Disclosure; SEQ ID NO 787; 141pp; English.
XX
CC The invention relates to a combination comprising cDNAs that are
CC differentially expressed in response to steroid treatment. Also included
CC are the following: a high throughput method for using a cDNA to detect
CC differential expression of nucleic acids in a sample; and a high
CC throughput method of screening molecules or compounds to identify a
CC ligand that specifically binds a cDNA. The sample is from a subject with
CC Wilson disease and comparison of a standard defines a stage of that
CC disease. The high throughput method of screening molecules or compounds
CC to identify a ligand that specifically binds a cDNA comprises: combining
CC the combination with molecules or compounds under conditions to allow
CC specific binding; and detecting specific binding between each cDNA and at
CC least one molecule or compound. The molecules or compounds are regulatory
CC proteins. The combination is useful for preparing a composition for
CC treating liver disorders associated with steroid therapy, e.g., cirrhosis
CC or hepatitis. The present sequence represents a human protein which is
CC differentially expressed in steroid-induced C3A liver cells. Note: The
CC sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format directly from USPTO
CC at seqdata.uspto.gov/sequence.html.

PS Claim 9; SEQ ID NO 10; 143pp; English.
XX
CC The present invention describes a novel human isolated nucleic acid (I)
CC designated PRON, where n represents a 4 or 5 digit number. Also
CC described: (1) a vector comprising (1); (2) a host cell comprising the
CC vector; (3) a process for producing a PRO polypeptide; (4) an isolated
CC PRO polypeptide; (5) a chimeric molecule comprising the polypeptide fused
CC to a heterologous amino acid sequence; (6) an antibody which specifically
CC binds to a PRO polypeptide; (7) a composition of matter comprising the
CC polypeptide or its agonist or antagonist or antibody and a carrier; (8)
CC an article of manufacture comprising a container and its label and the
CC composition of matter, contained within the container, where label on the
CC container indicates that the composition of matter can be used for
CC treating an immune related disorder; (9) a method of treating psoriasis
CC in a mammal; (10) a method for determining the presence of a PRO
CC polypeptide in a sample suspected of containing the polypeptide; (11) a
CC method of identifying a compound that inhibits the expression of a gene
CC encoding a PRO polypeptide from the present invention; (12) a method of
CC identifying a compound that mimics the activity of a PRO polypeptide from
CC the present invention; and (13) a method of diagnosing psoriasis in a
CC mammal. The PRO sequences have antipsoriatic activity, and can be used in
CC gene therapy. The PRO nucleic acid or polypeptide sequences from the
CC present invention can be used for preparing a composition for diagnosing
CC or treating psoriasis. The present sequence represents a human PRO
CC protein from the present invention.

XX

PS Disclosure; Page 53-56; 68pp; French.

XX

CC This protein is DBX1, which shows homology with RNA helicases but the

CC activity of a helicase has never been demonstrated and its function has

CC not yet been identified. DBX1 possesses the 8 characteristic motifs of

CC the helicases of the family "DEAD". In particular, it appears to be part

CC of the sub-family represented by helicase PL10. The DBX1 gene is situated

CC on the X chromosome and its homologue, which is situated on the Y

CC chromosome has 91 percent identity with a novel protein coding sequence.

CC The novel protein (see AA96482) is a human topoisomerase III-alpha

CC interacting protein (TIII-a IP). TIII-a IP has structural features in

CC common with RNA helicases (e.g. DBX1), which are involved in destruction

CC of the nucleosome structure, supercoiling of DNA, segregation of newly

CC replicated chromosomes, and recombination and stabilization of the

CC genome. Agents that alter interaction between TIII-a IP and TIII-a

CC therefore modulate cell division, replication, transcription,

CC translation, splicing and DNA recombination or repair, so may slow cell

CC growth, block the cell cycle or induce apoptosis. Antibodies and ligands

CC of TIII-a IP are used to prevent, treat or alleviate diseases that

CC involve abnormal regulation of the cell cycle, i.e. they are potential

CC anti-tumour (cytotoxic) agents

XX
CC The present invention describes a method for examining ischaemic
CC conditions, comprising measuring the expression levels of particular
CC genes (I) in a test sample or determining the expression profile of a
CC gene group in the sample comprising genes selected from (I). The method
CC is useful for examining the ischaemic condition (e.g. compressive
CC ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring
CC expression levels of particular genes (ABI99202 to ABI99912, encoding the
CC protein sequences in ABB57020 to ABB57374) or by determining the
CC expression profile of a gene group comprising these genes. The expression
CC levels or expression profiles produced by these genes are used as an
CC indicator when screening for ischaemic condition-improving drugs or
CC therapeutics for ischaemic diseases. ABI99913 and ABI99914 represent PCR
CC primers for a mouse ischaemic condition related sequence, which are used
CC in the exemplification of the present invention

PT Identifying modulators of the p53 pathway for use in treating apoptotic
PT or cell proliferation disorders, comprises screening for agents that
PT modulate activity of a human ortholog of genes that modify the p53
PT pathway in Drosophila.
XX
PS Example 2; Page 565-567; 678pp; English.
XX
CC The invention relates to identifying (M1) a candidate p53 pathway
CC modulating agent, by contacting an assay system comprising a purified HM
CC polypeptide (human orthologue of genes that modify the p53 pathway in
CC Drosophila) or nucleic acid with a test agent under conditions, where but
CC for the presence of the test agent, the system provides a reference
CC activity, and detecting a test agent-biased activity of the assay system.
CC Also included are modulating (M2) a p53 pathway of a cell (comprising
CC contacting a cell defective in p53 function with a candidate modulator
CC that specifically binds to a HM polypeptide comprising an HM amino acid
CC sequence, where p53 function is restored), modulating (M3) a p53 pathway
CC in a mammalian cell (comprising contacting the cell with an agent that
CC specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4)
CC a disease in a patient (comprising: (a) obtaining a biological sample
CC from the patient; (b) contacting the sample with a probe for HM
CC expression; (c) comparing the results with a control; and (d) determining
CC whether the comparison indicates a likelihood disease). (M1) is useful
CC for identifying modulators of the p53 pathway. A probe for HM expression
CC is useful for diagnosing breast, colon, kidney, lung and ovarian cancer,
CC in a patient, where the cancer has greater than 25 % expression level.
CC Modulators identified by (M1) are useful in a variety of diagnostic and
CC therapeutic applications, where disease or disorder prognosis is related
CC to defects in the p53 pathway, such as, angiogenesis, apoptotic or cell
CC proliferation disorders (e.g. cancer). Another two new methods (M2 and
CC M3) are useful for modulating the p53 pathway of a cell, thus restoring
CC the p53 function of the cell, so that the cell undergoes normal
CC proliferation or progression through the cell cycle. (M2) and (M3) are
CC also useful for treating defects in the p53 pathway such as angiogenic,
CC apoptotic or cell proliferation disorders. The present sequence
XX represents a human p53 pathway modifying protein

PT Isolating ribonucleoprotein complex, by contacting RNA affinity substrate
PT having ribonucleoprotein assembly sequence and affinity tag, with protein
PT mixture, subjecting complex formed to chromatography, affinity selection.
PS Claim 24; Page; 39pp; English.
XX
CC The invention relates to forming (M1) an isolated ribonucleoprotein (RNP)
CC complex (C), involves contacting an RNA affinity substrate (S) comprising
CC an RNP assembly sequence (AS) and an affinity tag, with a protein mixture
CC to permit formation of (C) on AS, subjecting (C) to chromatographic
CC separation, and subjecting (C) to affinity selection, where the affinity
CC tag (e.g. bacteriophage MS2 coat protein in a fusion protein with E. coli
CC maltose binding protein) binds to an affinity matrix. Also included are
CC an isolated spliceosome preparation (isolated by (M1)), a RNA comprising
CC an RNP complex binding site and at least one phage coat protein
CC recognition site, a nucleic acid encoding the RNA, and treating (M2) a
CC subject having a disorder associated with abnormal RNP complexes (by
CC obtaining a sample of cells from a subject, purifying RNP complexes from
CC the cells of the subject by (M1), determining the presence in the
CC purified RNP complexes of one or more proteins, and normalising the
CC amount of RNPs in the subject. (M1) is useful for forming an isolated RNP
CC complex selected from a spliceosomal complex (selected from E, A, B and C
CC complex), an hnRNP complex, an mRNA export complex, an mRNA localisation
CC complex, an RNA editing complex, an intron complex, or an H complex. (M1)
CC is useful in a diagnostic assay for determining whether a subject has
CC abnormal RNP complexes, (M2) is useful for treating a subject having a
CC disorder associated with abnormal RNP complexes. (M1) is useful for
CC forming an isolated RNP complex such as a telomerase complex, a fragile X
CC protein complex, a reverse transcriptase complex or a gene splicing
CC complex. The present sequence represents a known human spliceosome
CC associated protein (SAP) isolated by the methods of the invention. Note:
CC The present sequence is not shown in the specification but was obtained
CC from Genbank or Swissprot using the information provided in table 1 of
CC the specification

PT

PT to a cancer treatment comprising administration of a modulator of cyclin-
PT dependent kinase activity.
XX
PS Claim 5; SEQ ID NO 2099; 141pp; English.
XX
CC This invention describes a novel method of predicting or determining
CC whether a mammal will respond or is responding to an anti-cancer agent
CC that modulates cyclin-dependent kinase (cdk) activity. The method
CC comprises measuring the level of one or more biomarkers selected from
CC 2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC invention is utilized in a kit for determining or predicting whether
CC patient would be susceptible or resistant to treatment by an agent
CC modulating cdk activity. The invention also describes a method for
CC utilizing individualized genetic profiles for treating diseases and
CC disorders based on patient's response and molecular level, specialized
CC microarrays comprising the biomarkers described, antibodies directed
CC against the biomarkers and a cell culture model to identify biomarkers.
CC The cdk modulator is preferably N-5-([5-(1,1-Dimethylethyl)-2-
CC oxazolyl]methylthio)-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC tartaric acid salt. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC sequence represents a biomarker used in the method of the invention.

DR New polynucleotide comprising a sequence encoding a polypeptide having
PT inositol 1,3,4-triphosphate 5/6-kinase activity, useful in genetic or
PT physical mapping for plant breeding.
XX
PS Example 3; Fig 1; 32pp; English.
XX
CC This invention relates to a novel isolated polynucleotide which comprises
CC a sequence encoding a polypeptide having inositol 1,3,4-triphosphate 5/6-
CC kinase activity and comprising a sequence having 80% identity based on
CC the Clustal alignment method with a fully defined sequence comprising 139
CC amino acids, or its complement. The polynucleotide is useful in genetic
CC or physical mapping for plant breeding. The present sequence is that of a

CC plant inositol 1,3,4-triphosphate 5/6-kinase which was used in the
CC exemplification of the invention.

PS	Claim 5; Page 53-54; 63pp; English.					
XX						
CC	This sequence is an inositol 1,3,4-triphosphate 5/6-kinase (ITK) protein					
CC	of the invention. ITK is a phytic acid (Myo-inositol 1,2,3,4,5,6-					
CC	hexaphosphate) biosynthetic enzyme. The ITK enzymes of the invention may					
CC	be prepared recombinantly and used to raise antibodies, which are used					
CC	for detecting the enzymes in situ in cells or in vitro in cell extracts.					
CC	The polynucleotides of the invention may be used to create transgenic					
CC	plants in which the ITK levels are present at higher or lower levels than					
CC	normal, or in cell types or developmental processes where they are not					
CC	normally found. This would alter the level of 1,3,4-triphosphate 5/6					
CC	kinase found in those cells. In addition, it may be desirable to					
CC	eliminate expression of ITK genes for certain applications. The					
CC	polynucleotides also serve as a source of probes and primers, which are					
CC	useful for genetic mapping, as markers for traits linked to those genes,					
CC	and to isolate homologous sequences from other species, as well as for					
CC	physical mapping. Decreased amounts of phytate and increased amounts of					
CC	available phosphate in animal feeds such as corn would lead to improved					
CC	feed efficiency. The proteins of the present invention lead to a better					
CC	understanding of the phytic acid biosynthesis pathway, allowing it to be					
CC	exploited for commercial uses, e.g. in animal feeds

DR New antisense nucleic acids, useful for identifying proteins or screening
PT for homologous nucleic acids required for cellular proliferation to
PT isolate candidate molecules for rational drug discovery programs.
XX Claim 25; SEQ ID NO 55157; 1766pp; English.
XX The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of
CC the target prokaryotic essential genes. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PS Claim 11; SEQ ID NO 1144; 1180pp; English.
XX
CC The present invention relates to the isolation of novel human enzyme
CC polypeptides, and the cDNA (AAS40785-AAS41684) and genomic sequences
CC encoding them. The enzyme polypeptides of the invention may comprise the
CC functional classes of oxidoreductases, transferases, hydrolases, lyases,
CC isomerases or ligases. The sequences of the invention are useful in the
CC diagnosis, treatment, prevention and/or prognosis of a wide range of
CC disorders including hyperproliferative disorders (e.g. cancer),
CC immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g.
CC arthritis), neurological disorders (e.g. Alzheimer's disease), metabolic
CC disorders (e.g. phenylketonuria), inflammatory disorders (e.g. asthma),
CC cardiovascular disorders (e.g. atherosclerosis), blood-related disorders
CC (e.g. haemophilia), reproductive disorders (e.g. infertility) and
CC infectious disorders (e.g. Influenza). The polynucleotides of the
CC invention can also be used in gene therapy. AAU22915-AAU23814 represent
CC the novel human enzyme polypeptides of the invention. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT New isolated nucleic acid encoding a protein for diagnosing, preventing,
PT treating or ameliorating medical conditions and used as food additives or
PT preservatives.
XX
PS Claim 9; SEQ ID NO 1085; 837pp; English.
XX
CC The invention describes an isolated nucleic acid molecule (I) encoding a
CC novel central nervous system protein. (I) and polypeptides (III) encoded
CC by (I), are used to treat a medical conditions and in diagnosis of a
CC pathological condition. Disorders which are diagnosed or treated include
CC autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative
CC disorders e.g. neoplasms of the breast or liver, cardiovascular disorders
CC e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia,
CC angiogenesis, nervous system disorders e.g. Alzheimer's disease and
CC amyotrophic lateral sclerosis, infections caused by bacteria, viruses
CC e.g. Acquired immunodeficiency virus (AIDS) and fungi, ocular disorders
CC e.g. corneal infection, gastrointestinal disorders e.g. dysphagia,
CC adenocarcinomas and irritable bowel syndrome, reproductive system
CC disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes
CC and pituitary dwarfism, cancers and disorders at the cellular level e.g.
CC leukaemia, disorders involving neovascularisation e.g. malignancies,
CC respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g.
CC acute kidney failure and blood related disorders e.g. myocardial
CC infarction. The polypeptides can also be used to aid wound healing and
CC epithelial cell proliferation, to prevent skin aging due to sunburn, to
CC maintain organs before transplantation, for supporting cell culture of
CC primary tissues, to regenerate tissues and in chemotaxis. The
CC polypeptides can also be used as a food additive or preservative to
CC increase or decrease storage capabilities, fat content, lipid, protein,

XX
CC The invention describes an isolated polypeptide comprising an amino acid
CC sequence at least 90% identical to: a polypeptide fragment, domain,
CC epitope, or full-length protein of any one of 607 amino acid sequences
CC (I) described in the specification; a polypeptide fragment of (I), or the
CC encoded sequence contained in (II), having biological activity; or a
CC variant, allelic variant, or a species homologue of (I). The polypeptides
CC and nucleic acid molecules are useful for detecting, preventing,
CC diagnosing, prognosticating, treating or ameliorating medical conditions
CC such as neural disorders, e.g. Alzheimer's disease, Parkinson's disease,
CC Huntington's chorea, amyotrophic lateral sclerosis or multiple sclerosis,
CC immune system disorders, e.g. diabetes, rheumatoid arthritis, systemic

PT New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity.
XX
PS Claim 20; SEQ ID NO 56972; 103pp; English.
XX
CC The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC sequences. (I) is useful as hybridisation probes, polymerase chain
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC and in recombinant production of (II). The polynucleotides are also used
CC in diagnostics as expressed sequence tags for identifying expressed
CC genes. (I) is useful in gene therapy techniques to restore normal
CC activity of (II) or to treat disease states involving (II). (II) is
CC useful for generating antibodies against it, detecting or quantitating a
CC polypeptide in tissue, as molecular weight markers and as a food
CC supplement. (II) and its binding partners are useful in medical imaging
CC of sites expressing (II). (I) and (II) are useful for treating disorders
CC involving aberrant protein expression or biological activities. The
CC polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG0010-ABG30377 represent novel human diagnostic
CC amino acid sequences of the invention. Note: The sequence data for this
CC patent did not appear in the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

CC disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes
CC and pituitary dwarfism, cancers and disorders at the cellular level e.g.
CC leukaemia, disorders involving neovascularisation e.g. malignancies,
CC respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g.
CC acute kidney failure and blood related disorders e.g. myocardial
CC infarction. The polypeptides can also be used to aid wound healing and
CC epithelial cell proliferation, to prevent skin aging due to sunburn, to
CC maintain organs before transplantaton, for supporting cell culture of
CC primary tissues, to regenerate tissues and in Chemotaxis. The
CC polypeptides can also be used as a food additive or preservative to
CC increase or decrease storage capabilities, fat content, lipid, protein,

PS Claim 11; SEQ ID NO 788; 413pp; English.
XX
CC The invention describes an isolated polypeptide comprising an amino acid
CC sequence at least 90% identical to: a polypeptide fragment, domain,
CC epitope, or full-length protein of any one of 607 amino acid sequences
CC (I) described in the specification; a polypeptide fragment of (I), or the
CC encoded sequence contained in (II), having biological activity; or a
CC variant, allelic variant, or a species homologue of (I). The polypeptides
CC and nucleic acid molecules are useful for detecting, preventing,
CC diagnosing, prognosticating, treating or ameliorating medical conditions
CC such as neural disorders, e.g. Alzheimer's disease, Parkinson's disease,
CC Huntington's chorea, amyotrophic lateral sclerosis or multiple sclerosis,
CC immune system disorders, e.g. diabetes, rheumatoid arthritis, systemic

XX PT New polynucleotide comprising a sequence encoding a polypeptide having

XX PT inositol 1,3,4-triphosphate 5/6-kinase activity, useful in genetic or

XX PT physical mapping for plant breeding.

XX PS Example 3; Fig 1; 32pp; English.

XX CC This invention relates to a novel isolated polynucleotide which comprises
CC a sequence encoding a polypeptide having inositol 1,3,4-triphosphate 5/6-
CC kinase activity and comprising a sequence having 80% identity based on
CC the Clustal alignment method with a fully defined sequence comprising 139
CC amino acids, or its complement. The polynucleotide is useful in genetic
CC or physical mapping for plant breeding. The present sequence is that of a
CC plant inositol 1,3,4-triphosphate 5/6-kinase which was used in the
CC exemplification of the invention.

PS Claim 5; Page 44-45; 63pp; English.
XX
CC This sequence is an inositol 1,3,4-triphosphate 5/6-kinase (ITK) protein
CC of the invention. ITK is a phytic acid (Myo-inositol 1,2,3,4,5,6-
CC hexaphosphate) biosynthetic enzyme. The ITK enzymes of the invention may
CC be prepared recombinantly and used to raise antibodies, which are used
CC for detecting the enzymes in situ in cells or in vitro in cell extracts.
CC The polynucleotides of the invention may be used to create transgenic
CC plants in which the ITK levels are present at higher or lower levels than
CC normal, or in cell types or developmental processes where they are not
CC normally found. This would alter the level of 1,3,4-triphosphate 5/6
CC kinase found in those cells. In addition, it may be desirable to
CC eliminate expression of ITK genes for certain applications. The
CC polynucleotides also serve as a source of probes and primers, which are
CC useful for genetic mapping, as markers for traits linked to those genes,
CC and to isolate homologous sequences from other species, as well as for
CC physical mapping. Decreased amounts of phytate and increased amounts of
CC available phosphate in animal feeds such as corn would lead to improved
CC feed efficiency. The proteins of the present invention lead to a better
CC understanding of the phytic acid biosynthesis pathway, allowing it to be
CC exploited for commercial uses, e.g. in animal feeds

PT Novel nucleic acid molecule which modulates inositol 1,3,4-triphosphate
PT 5/6-kinases, useful to alter plant phenotype, to decrease phytate and
PT increase non-phytate phosphorus in corn or soy animal feedstuffs.
XX
PS Claim 1; SEQ ID NO 8; 88pp; English.
XX
CC The present invention relates to an isolated nucleic acid which modulates
CC the level of inositol 1,3,4-triphosphate 5/6-kinases (ITPK). The method
CC is useful for altering plant phenotype, by transforming a plant host
CC cell, and at least one polynucleotide of interest (POI), growing the
CC transformed host cell to modulate the activity of ITPK and the
CC polynucleotide of interest in the host cell and generating a transformed
CC plant with an altered phenotype. POI is myoinositol monophosphatase or
CC phytase, the activity of ITPK is down regulated, and the activity of the
CC polynucleotide of interest is up-regulated, or POI is inositol
CC polyphosphate kinase or myo-inositol 1-phosphate synthase and the
CC activity of ITPK and POI are each down-regulated. The method is useful
CC for modulating ITPK activity or levels in a host cell, preferably a plant
CC cell. This method reduces the level of phytate and increases the level of
CC non-phytate phosphorous. It is also useful for improving the nutritional
CC value of animal feed, by transforming a plant host cell to reduce phytate
CC content, growing the transformed host cell to modulate ITPK activity in
CC the host cell, generating a plant with the transformed genotype and
CC producing animal feed from the plant, where the animal feed has improved
CC nutritional value. The present sequence represents a protein which can
CC modulate the level of inositol.

New recombinant DNA constructs useful in the field of biochemistry and
genetics, and in particular for producing transgenic plants with improved
biological characteristics.

Claim 2; SEQ ID NO 9551; 14pp; English.

The invention relates a recombinant DNA construct comprising a
polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:
1-5544) and encoding a polypeptide with any of 5544 amino acid sequences
(SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,
Arabidopsis, wheat and rape but the specification does not indicate which
sequences is derived from which organism. Also included is a method of
producing a plant having an improved property, comprising transforming a
plant with a recombinant DNA construct comprising a promoter region
functional in a plant cell operably joined to a polynucleotide encoding a
polypeptide associated with the property, and growing the transformed
plant. The property is selected from improving plant cold tolerance, for
manipulating growth rate in plant cells by modification of the cell cycle
pathway, for improving plant drought tolerance, for providing increased
resistance to plant disease, for galactomannan production, for production
of plant growth regulators, for improving plant heat tolerance, for
improving plant tolerance to herbicides, for increasing the rate of
homologous recombination in plants, for lignin production, for improving
plant tolerance to extreme osmotic conditions, for improving plant
tolerance to pathogens or pests, for yield improvement by modification of
photosynthesis, for modifying seed oil yield and/or content, for
modifying seed protein yield and/or content, for yield improvement by
modification of carbohydrate, nitrogen or phosphorus use and/or uptake
and for yield improvement by providing improved plant growth and
development under at least one stress condition. The polynucleotide may
also encode a plant transcription factor. The methods and compositions of
the present invention are useful in the field of biochemistry and
genetics, in particular for producing transgenic plants with improved
biological characteristics such as increased yield, improved nitrogen
flow, increasing plant tolerance to cold or heat, improving plant
tolerance to extreme osmotic and drought conditions, and improving plant
tolerance to plant pests or pathogens. They can also be used in physical
arrays of molecules, plant breeding markers, computer-based storage and
analysis systems. The present sequence is one of the 5544 plant protein
sequences of the invention. Note: The sequence data for this patent did
not form part of the printed specification, but was obtained in
electronic format directly from USPTO at
seqdata.uspto.gov/sequence.html?DocID=20040216190.

RT "Requirement of DDX3 DEAD box RNA helicase for HIV-1 Rev-RRE export
RT function.";
RL Cell 119:381-392(2004).
CC -!- FUNCTION: ATP-dependent RNA helicase. Acts as a cofactor for XPO1-
CC mediated nuclear export of incompletely spliced HIV-1 Rev RNAs.
CC Also involved in HIV-1 replication. Interacts specifically with
CC hepatitis C virus core protein resulting in a change in
CC intracellular location.
CC -!- SUBUNIT: Found in a complex with Rev and XPO1. Interacts with
CC XPO1. Interacts with HCV core protein.
CC -!- INTERACTION:
CC Q00653:NFKB2; NbExp=1; IntAct=EBI-353779, EBI-307326;
CC -!- SUBCELLULAR LOCATION: Located predominantly in nuclear speckles
CC and, at low levels, throughout the cytoplasm. Located to the outer
CC side of nuclear pore complexes (NPC). Shuttles between the nucleus
CC and the cytoplasm in a XPO1-dependent manner.
CC -!- SIMILARITY: Belongs to the DEAD box helicase family. DDX3
CC subfamily.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX
PS Claim 19; Page 216; 608pp; English.
XX
XX The present invention describes composition of matter (I) comprising an

CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P³, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

XX Novel vehicle-peptide molecule or its multimers useful for treating
PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.

PS Claim 39; Page 43; 176pp; English.

XX The present invention describes a vehicle-peptide molecule (I) or its

CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,

CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,

CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and

CC neuroprotective activities. (I) can be used as a therapeutic or

CC prophylactic agent as well as for screening purposes. (I) is useful for

CC diagnosing diseases characterised by dysfunction of their associated

CC protein of interest, for identifying normal or abnormal proteins of

CC interest, as a part of diagnostic kit to detect the presence of their

CC proteins of interest in a biological sample. Additionally, (I) is useful

CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,

CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,

CC infertility, and neurological degenerative diseases. (I), comprising EPO-

CC mimetic compounds are useful for treating disorders characterised by low

CC red blood cell levels such as anaemia. The TPO-mimetic comprising

CC compounds are useful for treating conditions that involve an existing

CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet

CC deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic

CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,

CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

DR

XX New CDR mimetibody comprising a portion of a heavy or light chain

PT variable region comprising human framework or ligand binding region,

PT useful for preparing a composition for treating e.g., immune,

PT cardiovascular or neurologic disease.

XX

.PS Disclosure; SEQ ID NO 497; 97pp; English.

XX This invention relates to novel mammalian CDR mimetibodies, specific

CC portions or variants thereof. Specifically, it refers to an antibody

CC fragment where a protein has been inserted, into, or replaces a portion

CC of, one or more CDR regions, such that each CDR mimetibody comprises at

CC least one portion of a heavy chain or light chain variable region, which

CC itself comprises at least one human framework region and at least one

CC ligand binding region (LBR). The present invention describes human

CC mimetibodies, including modified immunoglobulins and cleavage products

CC that can be useful in gene therapy and the generation of transgenic

CC plants and animals. Furthermore, the CDR mimetibody is useful for

CC preparing compositions for modulating, treating or reducing the symptoms

CC of immune, cardiovascular, infectious, malignant and/ or neurologic

CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,

CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This

CC peptide sequence is a TPO mimetic peptide sequence used to make a

CC mimetibody of the invention.

PS Claim 2; SEQ ID NO 497; 129pp; English.

XX

CC This invention relates to CH1 deleted mimetibodies (and the DNA sequences

CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

PS Claim 14; SEQ ID NO 497; 123pp; English.
XX
CC This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an osteopathic,
CC cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen,
CC gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haemostatic,
CC immunomodulator, antiallergic, muscular-Gen, cytostatic,
CC antiinflammatory, neuroleptic, ophthalmological, nephrotropic or
CC respiratory-Gen activity acting as a tumour necrosis factor (TNF)-
CC modulator or cytokine-agonist. The methods and compositions of the
CC present invention are useful for the diagnosis, prevention and/or
CC treatment of diseases or conditions associated with aberrant expression
CC or activity of the CH1 deleted mimetibody, such as a bone or joint,
CC cardiovascular, dental or oral, dermatological, ear, nose or throat,
CC endocrine, metabolic, gastrointestinal, gynaecological, hepatic,
CC obstetric, haematologic, immunological, allergic, infectious,
CC musculoskeletal, oncological, neurological, nutritional, ophthalmologic,
CC pediatric, psychiatric, renal or pulmonary disorders. The present
CC sequence is that of a peptide which may be used during the creation of a
CC mimetibody of the invention.

PT Activating thrombopoietin receptors in cells, used to treat
PT thrombocytopenia and hematological disorders, comprises contacting cells
PT with peptides and peptide mimetics attached to hydrophilic polymers.
XX
PS Disclosure; Col 151; 128pp; English.
XX
CC Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that
CC bind to and activate the human thrombopoietin receptor (TPO-R). Methods
CC of activating thrombopoietin receptors in cells comprise contacting the
CC cells with effective amounts of peptides and peptide mimetics attached to
CC hydrophilic polymers. The methods are used to treat thrombocytopenia such
CC as that due to chemotherapy, radiation therapy or bone-marrow
CC transplantation and to prevent thrombocytopenia in patients at risk. The
CC sequences are used to treat and prevent haematological disorders
CC including thrombocytopenia and platelet disorders. They are used in vitro
CC as unique tools for understanding the biological role of thrombopoietin
CC (TPO) and to develop other compounds that bind to and activate the TPO
CC receptor. The peptides can be used to detect TPO receptors on living

cells and fixed cells, in biological fluids, in tissue homogenates, and in purified or natural biological materials. They may also be used for in situ staining, fluorescence-activated cell sorting, Western blotting and enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can be used for in vitro expansion of megakaryocytes and their committed progenitors alone or in conjunction with additional cytokines

XX	CC	Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that					
CC	CC	bind to and activate the human thrombopoietin receptor (TPO-R). Methods					
CC	CC	of activating thrombopoietin receptors in cells comprise contacting the					
CC	CC	cells with effective amounts of peptides and peptide mimetics attached to					
CC	CC	hydrophilic polymers. The methods are used to treat thrombocytopenia such					
CC	CC	as that due to chemotherapy, radiation therapy or bone-marrow					
CC	CC	transplantation and to prevent thrombocytopenia in patients at risk.The					
CC	CC	sequences are used to treat and prevent haematological disorders					
CC	CC	including thrombocytopenia and platelet disorders. They are used in vitro					
CC	CC	as unique tools for understanding the biological role of thrombopoietin					
CC	CC	(TPO) and to develop other compounds that bind to and activate the TPO					
CC	CC	receptor. The peptides can be used to detect TPO receptors on living					
CC	CC	cells and fixed cells, in biological fluids, in tissue homogenates, and					
CC	CC	in purified or natural biological materials. They may also be used for in					
CC	CC	situ staining, fluorescence-activated cell sorting, Western blotting and					
CC	CC	enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can					
CC	CC	be used for in vitro expansion of megakaryocytes and their committed					
CC	CC	progenitors alone or in conjunction with additional cytokines

XX	PT	New CDR mimetibody comprising a portion of a heavy or light chain					
PT	PT	variable region comprising human framework or ligand binding region,					
PT	PT	useful for preparing a composition for treating e.g., immune,					
PT	PT	cardiovascular or neurologic disease.					
XX	PS	Disclosure; SEQ ID NO 457; 97pp; English.					
XX	CC	This invention relates to novel mammalian CDR mimetibodies, specific					
CC	CC	portions or variants thereof. Specifically, it refers to an antibody					
CC	CC	fragment where a protein has been inserted into, or replaces a portion					
CC	CC	of, one or more CDR regions, such that each CDR mimetibody comprises at					
CC	CC	least one portion of a heavy chain or light chain variable region, which					
CC	CC	itself comprises at least one human framework region and at least one					
CC	CC	ligand binding region (LBR). The present invention describes human					
CC	CC	mimetibodies, including modified immunoglobulins and cleavage products					
CC	CC	that can be useful in gene therapy and the generation of transgenic					
CC	CC	plants and animals. Furthermore, the CDR mimetibody is useful for					
CC	CC	preparing compositions for modulating, treating or reducing the symptoms					
CC	CC	of immune, cardiovascular, infectious, malignant and/ or neurologic					
CC	CC	diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,					
CC	CC	cardiant, antimicrobial, cytostatic and neuroprotective activities. This					
CC	CC	peptide sequence is a TPO mimetic peptide sequence used to make a					
CC	CC	mimetibody of the invention.

XX New CH1-deleted mimetibody polypeptides and nucleic acids, useful for
PT modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.
XX
PS Claim 2; SEQ ID NO 457; 129pp; English.
XX
CC This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

XX Peptides and peptide mimetics which bind to and activate the
XX thrombopoietin receptor - useful in treatment of haematological
PT disorders, esp. thrombocytopenia resulting from chemotherapy, etc.
PT
XX Example 9; Page 78; 106pp; English.
PS
XX The present peptide, which binds the thrombopoietin receptor (TR), can be
CC used to treat disorders which are susceptible to treatment with a
CC thrombopoietin agonist, preferably haematological disorders and
CC thrombocytopenia resulting from chemotherapy, radiation therapy or bone
CC marrow transfusions. It can also be used diagnostically, e.g. to
CC investigate the mechanism of thrombopoietin signal transduction and
CC receptor activation, or to maintain the proliferation and growth of
CC thrombopoietin dependent cell lines

PS Claim 24; Page 90; 113pp; English.
XX
CC The invention relates to a novel pharmacologically active peptide
CC conjugate having a reduced tendency towards enzymatic cleavage comprises
CC X and Z, where: (a) X is a pharmacologically active peptide sequence; and
CC (b) Z is a stabilising peptide sequence of 4-20 amino acid units
CC covalently bound to X, where each amino acid unit in the stabilizing
CC peptide sequence, Z being selected from Ala, Leu, Ser, Thr, Tyr, Asn,
CC Gln, Asp, Glu, Lys, Arg, His, Met, Orn, and amino acid units of formula -
CC NH-C(R1)(R2)-C(=O)- (I), where: R1 and R2 are H, 1-6C alkyl, phenyl, and
CC phenyl-methyl, where 1-6C-alkyl is optionally substituted with 1 -3
CC substituents selected from halogen, hydroxy, amino, cyano, nitro,
CC sulfonyl, and carboxy, and phenyl and phenyl-methyl are optionally
CC substituted with 1-3 substituents selected from 1-6C-alkyl, 2-6C-alkenyl,
CC halogen, hydroxy, amino, cyano, nitro, sulfonyl, and carboxy, or R 1 and R
CC 2 together with the C atom to which they are bound form a cyclopentyl,
CC cyclohexyl or cycloheptyl ring, e.g. 2,4-diaminobutanoic acid and 2,3-
CC diaminopropanoic acid; the ratio between the half-life of the peptide
CC conjugate and the half-life of the corresponding active peptide sequence,
CC X, when treated with carboxypeptidase A or leucine aminopeptidase in
CC about 50 mM phosphate buffer solution at about pH 7.4 and about 37 deg C
CC or in serum or plasma is at least about 2 (preferably at least about 10),
CC or when the pharmacologically active peptide X is not orally absorbed,
CC the conjugate is adsorbed, or a salt, with the proviso that the
CC pharmacologically active peptide conjugate is not selected from sequences
CC (ADI24837)-(ADI24841). The peptide conjugates can be used for treating
CC e.g. pain, HIV, cancer, diabetes, incontinence, hypertension, amnesia,
CC Alzheimer's disease, fever, depression, sex hormone regulation, eating
CC disorders, schizophrenia, osteoporosis or insomnia. They can also be used
CC for treating e.g. CNS disorders and as contraceptives. The conjugated
CC peptides are less susceptible to degradation by proteases compared to the
CC corresponding free pharmacologically active peptides. This sequence
CC represents a pharmacologically active peptide as the X part of the
CC peptide of the invention.

XX Thrombopoietic peptides which activate mpl receptors and increase the
PT production of platelets or platelet precursors, useful for treatment of
PT diseases which involve thrombocytopenia.
XX Claim 7; Page 60; 91pp; English.
XX A compound which binds to an mpl receptor comprising a thrombopoietin
CC mimetic peptide (TMP) dimer joined by a linker [TMP 1-(L 1) nTMP 2], is
CC new. TMP 1 and TMP 2 are amino acid sequences varying from at least 10 to
CC 14 residues in length comprising X 2-X 1 0, X 2-X 1 1, X 2-X 1 2, X 2-
CC X 1 3, X 2-X 1 4, X 1-X 1 0, X 1-X 1 1, X 1-X 1 2, X 1-X 1 3, and X 1-
CC X 1 4. X 1 = I, A, V, L, S or R; X 2 = E, D, K or V; X 3 = G or A; X 4 =
CC P; X 5 = T or S; X 6 = L, I, V, A or F; X 7 = R or K; X 8 = Q, N, or E;
CC X 9 = W, Y or F; X 1 0 = L, I, V, A, F, M, or K; X 1 1 = A, I, V, L, F,
CC S, T, K, H, or E; X 1 2 = A, I, V, L, F, G, S, or Q; X 1 3 = R, K, T, V,
CC N, Q or G; X 1 4 = A, I, V, L, F, T, R, E, or G; L 1 = linker comprising
CC 1 to 20 amino acids; and n = 0 or 1. The compounds bind to and activate
CC the c-Mpl receptor which mediates the activity of endogenous
CC thrombopoietin. The TMPs are useful for increasing the production of
CC platelets or platelet precursors (e.g. megakaryocytes) in a mammal, which
CC is useful for treatment of diseases which involve thrombocytopenia, e.g.
CC aplastic anaemia, immune thrombocytopenia (ITP), human immunodeficiency
CC virus associated ITP, and systemic lupus erythematosus

XX Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX Claim 19; Page 189; 608pp; English.
PS The present invention describes composition of matter (I) comprising an
XX Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P^3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

XX Activating thrombopoietin receptors in cells, used to treat thrombocytopenia and hematological disorders, comprises contacting cells with peptides and peptide mimetics attached to hydrophilic polymers.

XX Disclosure; Col 149-150; 128pp; English.

XX Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that bind to and activate the human thrombopoietin receptor (TPO-R). Methods of activating thrombopoietin receptors in cells comprise contacting the cells with effective amounts of peptides and peptide mimetics attached to hydrophilic polymers. The methods are used to treat thrombocytopenia such as that due to chemotherapy, radiation therapy or bone-marrow transplantation and to prevent thrombocytopenia in patients at risk. The sequences are used to treat and prevent haematological disorders including thrombocytopenia and platelet disorders. They are used in vitro as unique tools for understanding the biological role of thrombopoietin (TPO) and to develop other compounds that bind to and activate the TPO receptor. The peptides can be used to detect TPO receptors on living cells and fixed cells, in biological fluids, in tissue homogenates, and in purified or natural biological materials. They may also be used for in situ staining, fluorescence-activated cell sorting, Western blotting and enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can be used for in vitro expansion of megakaryocytes and their committed progenitors alone or in conjunction with additional cytokines

PT with peptides and peptide mimetics attached to hydrophilic polymers.
XX
PS Disclosure; Col 69-70; 128pp; English.
XX
CC Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that
CC bind to and activate the human thrombopoietin receptor (TPO-R). Methods
CC of activating thrombopoietin receptors in cells comprise contacting the
CC cells with effective amounts of peptides and peptide mimetics attached to
CC hydrophilic polymers. The methods are used to treat thrombocytopenia such
CC as that due to chemotherapy, radiation therapy or bone-marrow
CC transplantation and to prevent thrombocytopenia in patients at risk. The
CC sequences are used to treat and prevent haematological disorders
CC including thrombocytopenia and platelet disorders. They are used in vitro
CC as unique tools for understanding the biological role of thrombopoietin
CC (TPO) and to develop other compounds that bind to and activate the TPO
CC receptor. The peptides can be used to detect TPO receptors on living
CC cells and fixed cells, in biological fluids, in tissue homogenates, and
CC in purified or natural biological materials. They may also be used for in
CC situ staining, fluorescence-activated cell sorting, Western blotting and
CC enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can
CC be used for in vitro expansion of megakaryocytes and their committed
CC progenitors alone or in conjunction with additional cytokines

CC The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

DR A novel immunogen molecule comprising a region in which amino acid
XX residues corresponding to at least a portion of the complementary
PT determining region are replaced or fused with an erythropoietin or
PT thrombopoietin mimetic.
XX
PS Claim 18; Page 6; 113pp; English.
XX The present invention describes an immunoglobulin molecule or its fragment
CC (I) comprising a region where amino acid residues corresponding to at
CC least a portion of the complementary determining region (CDR) are
CC replaced or fused with biologically active peptides e.g. a peptide
CC mimetic such as an erythropoietin (EPO) or thrombopoietin (TPO) mimetic,
CC that is flanked with proline at its carboxy terminus. (I) has
CC antianaemic, haemostatic and nephrotropic activities, and can be used as
CC a stimulator of proliferation, differentiation and maturation of
CC haematopoietic cells, and a stimulator of haematopoiesis. (I) is useful
CC for stimulating proliferation, differentiation or growth of
CC promegakaryocytes or megakaryocytes, where (I) is contacted with
CC promegakaryocytes or megakaryocytes, which results in increased platelet
CC production. (I) with a region where amino acid residues corresponding to
CC a portion of CDR is replaced with an EPO mimetic, or which has one or
CC more of its CDRs fused to an EPO mimetic, is useful for increasing the
CC production of red blood cells, where (I) is contacted with haematopoietic
CC stem cells or their progenitors. (I) is useful for diagnostics or
CC therapeutics, in cell isolation strategies, and for treating patients
CC suffering from deficiency in cell populations caused by disease,
CC disorders or treatments related to the suppression of haematopoiesis.

XX Antibody targeting compound useful e.g. for diagnostic immunoassays and
PT treating microbial diseases comprises targeting or biological agent
PT covalently linked to combining site of the antibody.
XX
PS Example 7; Page 62; 56pp; English.
XX
CC The present sequence is that of thrombopoietin (TPO) mimetic peptide
CC AF12505, which mimics the activity of recombinant TPO. The invention
CC provides antibody targeting compounds that are used to reprogram the
CC specificity of an antibody. The antibody targeting compound is linked to
CC the combining site of the antibody, such that the modified antibody takes
CC on the binding specificity of the targeting agent. In an example from the
CC invention, a TPO receptor targeting antibody compound was prepared by
CC covalently linking peptide AB12505 to aldolase monoclonal antibody 38C2.
CC The TPO receptor targeting antibody compound can be used to treat
CC thrombocytopaenia resulting from chemotherapy and bone marrow
CC transplantation

PT New chimeric retrovirus envelope protein comprising an ecotropic envelope
PT protein and a heterologous short peptide ligand inserted within the
PT ecotropic envelope protein useful for treating cancer.
XX

PS Disclosure; SEQ ID NO 1; 42pp; English.
XX
CC The present invention describes a chimeric retrovirus envelope protein
CC (I) comprising an ecotropic envelope protein and a heterologous short
CC peptide ligand inserted within the ecotropic envelope protein. Also
CC described: (1) a nucleic acid molecule comprising a sequence encoding the
CC recombinant chimeric envelope protein; (2) a vector comprising a nucleic
CC acid sequence encoding the chimeric envelope protein; (3) a recombinant
CC retroviral particle comprising a chimeric envelope protein comprising a
CC heterologous short peptide ligand; (3) altering retroviral tropism; (4)
CC identifying a nucleic acid sequence encoding the chimeric envelope
CC protein that alters viral tropism; (5) delivering a nucleic acid sequence
CC to a cell; and (6) treating cancer. (I) has cytostatic activity and can
CC be used in gene therapy. The chimeric retrovirus envelope protein is
CC useful for treating cancer, which comprises providing a cancer cell, e.g.
CC human cancer cell and infecting the cancer cell with a virus, e.g.
CC retrovirus comprising the chimeric envelope protein comprising a
CC heterologous short peptide ligand and a therapeutically useful gene, e.g.
CC encoding thymidine kinase. The present sequence represents an
CC erythropoietin receptor/erythropoietin consensus peptide, which is given
CC in the exemplification of the present invention.

PT New CDR mimetibody comprising a portion of a heavy or light chain
PT variable region comprising human framework or ligand binding region,
PT useful for preparing a composition for treating e.g., immune,
PT cardiovascular or neurologic disease.
XX
PS Disclosure; SEQ ID NO 458; 97pp; English.
XX
CC This invention relates to novel mammalian CDR mimetibodies, specific
CC portions or variants thereof. Specifically, it refers to an antibody

CC fragment where a protein has been inserted into, or replaces a portion
CC of, one or more CDR regions, such that each CDR mimetibody comprises at
CC least one portion of a heavy chain or light chain variable region, which
CC itself comprises at least one human framework region and at least one
CC ligand binding region (LBR). The present invention describes human
CC mimetibodies, including modified immunoglobulins and cleavage products
CC that can be useful in gene therapy and the generation of transgenic
CC plants and animals. Furthermore, the CDR mimetibody is useful for
CC preparing compositions for modulating, treating or reducing the symptoms
CC of immune, cardiovascular, infectious, malignant and/ or neurologic
CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC peptide sequence is a TPO mimetic peptide sequence used to make a
CC mimetibody of the invention.

XX
CC The invention relates to a thrombopoietin mimetic peptide (TMP) (I) that
CC binds to the c-mpl (mpl) receptor, and which stimulates the production of
CC platelets and/or the production of platelet precursors, is new. Further
CC disclosed is a composition of matter (II) that binds to an mpl receptor,
CC and a pharmaceutical composition comprising (II) and a carrier. The
CC pharmaceutical composition of the invention is useful for treating
CC thrombocytopaenia in an animal, and for increasing megakaryocytes or

CC platelets in a patient. The TMP of the invention is useful for treating
CC conditions involving a megakaryocyte and/or platelet deficiency, e.g.
CC disease conditions involving thrombocytopaenia such as aplastic anaemia,
CC autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia,
CC autoimmune haemolytic anaemia, Hughe's syndrome and lupoid
CC thrombocytopaenia. The TMP of the invention is also useful for
CC maintaining the viability or storage life of platelets and/or
CC megakaryocytes and its derived cells. The compounds demonstrate an
CC improved ability to bind to and/or trigger transmembrane signal through,
CC i.e. activating, the mpl receptor the compounds have superior
CC thrombopoietic activity, i.e. the ability to stimulate, in vivo and in
CC vitro, the production of platelets and/or megakaryocytopoietic activity,
CC i.e. the ability to stimulate, in vivo and in vitro, the production of
CC platelet precursors. Further, certain of the compounds also exhibit
CC superior therapeutic properties, such as improved plasma half-life,
CC biological activity and in vivo circulation time. The current sequence
CC represents a TMP of the invention.

XX
CC This invention relates to CH1 deleted mimetibodies (and the DNA sequences

CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

XX Claim 14; SEQ ID NO 458; 123pp; English.

XX This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an osteopathic,
CC cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen,
CC gastrointestinal-Gen, gynaecological-Gen, hepatotropic, haemostatic,
CC immunomodulator, antiallergic, muscular-Gen, cytostatic,
CC antiinflammatory, neuroleptic, ophthalmologic, nephrotropic or
CC respiratory-Gen activity acting as a tumour necrosis factor (TNF)-
CC modulator or cytokine-agonist. The methods and compositions of the
CC present invention are useful for the diagnosis, prevention and/or
CC treatment of diseases or conditions associated with aberrant expression
CC or activity of the CH1 deleted mimetibody, such as a bone or joint,
CC cardiovascular, dental or oral, dermatological, ear, nose or throat,
CC endocrine, metabolic, gastrointestinal, gynaecological, hepatic,
CC obstetric, haematologic, immunological, allergic, infectious,
CC musculoskeletal, oncological, neurological, nutritional, ophthalmologic,
CC pediatric, psychiatric, renal or pulmonary disorders. The present
CC sequence is that of a peptide which may be used during the creation of a
CC mimetibody of the invention.

XX Obtaining a recombinant fusion protein, useful for treating lupus,
PT comprises providing a prokaryotic host cell carrying a nucleic acid
PT encoding the recombinant protein operably linked to a promoter functional
PT in the prokaryotic cell.

XX Claim 8; Page 48; 69pp; English.

XX The specification describes a method for obtaining a recombinant fusion
CC protein comprising a scaffold of a C-terminal core protein of C4bp alpha

CC chain, where the recombinant fusion protein is capable of forming
CC multimers in soluble form in a prokaryotic host cell. The method
CC comprises providing a prokaryotic host cell carrying a nucleic acid
CC encoding the recombinant protein operably linked to a promoter functional
CC in the prokaryotic cell, culturing the host cell under conditions where
CC the recombinant protein is expressed, and recovering the recombinant
CC protein where the protein is recovered in multimeric form without
CC performing a scaffold refolding step. The protein is useful for treating
CC systemic lupus erythematosus. The present sequence represents a
CC thrombopoietin agonist peptide, which is used to produce fusion proteins
CC of the invention.

PT Increasing hematopoietic stem cell production in subject, useful in
PT reducing the incidence of delayed primary engraftment, comprises
PT administering a Thrombopoietin mimetic compound e.g., a peptide to a
PT subject.
XX
PS Disclosure; Fig 2; 32pp; English.

CC The invention relates to a method (M1) for increasing haematopoietic stem
CC cell production in a subject which involves administering a
CC Thrombopoietin (TPO) mimetic compound to the subject. Also included is
CC another method (M2) of providing haematopoietic stem cells to a subject
CC which involves administering a TPO mimetic compound to a subject to
CC enhance expansion of a stem cell population within bone marrow and/or
CC mobilize stem cells in peripheral circulation, harvesting one or more of
CC the bone marrow stem cells or the stem cells in the peripheral
CC circulation, and transplanting the harvested stem cells into the subject.

CC A method (M3) is also provided for reducing a time to engraftment
CC following reinfusion of stem cells in a subject, involves administering a
CC TPO mimetic compound to the subject, enhancing the expansion of the stem
CC cell population within bone marrow and/or mobilizing the stem cells in
CC peripheral circulation, harvesting one or more of the bone marrow stem
CC cells or one or more of the stem cells in the peripheral circulation, and
CC transplanting the one or more harvested stem cells into the subject. TPO
CC mimetic compounds are disclosed as peptides, including cyclic or modified
CC peptides. (M1) is useful for increasing haematopoietic stem cell
CC production in a subject e.g., human. (M3) is useful for reducing time to
CC engraftment following reinfusion of stem cells, reducing the incidence of
CC delayed primary engraftment, reducing the incidence of secondary failure
CC of platelet production and reducing the time of platelet and/or
CC neutrophil engraftment following reinfusion of stem cells in a subject.
CC (M1) is also useful for increasing the number of stem cells from a donor
CC whose cells are then used for rescue of recipient subject. Also useful in
CC the treatment of thrombocytopenia. (M1) enables transplantation to
CC proceed in patients who would not otherwise be considered as candidates
CC because of unacceptably high risk of failed engraftment, reduces the
CC number of aphereses required to generate a minimum acceptable harvest,
CC reduces the incidence of primary and secondary failure of engraftment by
CC increasing the number of haematopoietic stem cells (HSCs) available for
CC transplantation and reduces the time required for primary engraftment.
CC The present sequence represents an example of TPO mimetic peptide
CC fragment.

CC delayed primary engraftment, reducing the incidence of secondary failure

CC of platelet production and reducing the time of platelet and/or

CC neutrophil engraftment following reinfusion of stem cells in a subject.

CC (M1) is also useful for increasing the number of stem cells from a donor

CC whose cells are then used for rescue of recipient subject. Also useful in

CC the treatment of thrombocytopenia. (M1) enables transplantation to

CC proceed in patients who would not otherwise be considered as candidates

CC because of unacceptably high risk of failed engraftment, reduces the

CC number of aphereses required to generate a minimum acceptable harvest,

CC reduces the incidence of primary and secondary failure of engraftment by

CC increasing the number of haematopoietic stem cells (HSCs) available for

CC transplantation and reduces the time required for primary engraftment.

CC The present sequence represents an example of TPO mimetic peptide

CC fragment.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC -I- FUNCTION: Early post-infection, the reverse transcriptase converts
CC the viral RNA genome into double-stranded viral DNA. The RNase H
CC domain of the reverse transcriptase performs two functions. It
CC degrades the RNA template and specifically removes the RNA primer
CC from the RNA/DNA hybrid. Following nuclear import, the integrase
CC catalyzes the insertion of the linear, double-stranded viral DNA
CC into the host cell chromosome. Endogenous Pol proteins may have
CC kept, lost or modified their original function during evolution
CC (By similarity).
CC -I- SUBUNIT: Homodimer (By similarity).
CC -I- DOMAIN: The LPQG and YXDD motifs are catalytically important and
CC conserved among many retroviruses (By similarity).
CC -I- SIMILARITY: Contains 1 reverse transcriptase domain.

CC -I- FUNCTION: Early post-infection, the reverse transcriptase converts
CC the viral RNA genome into double-stranded viral DNA. The RNase H
CC domain of the reverse transcriptase performs two functions. It
CC degrades the RNA template and specifically removes the RNA primer
CC from the RNA/DNA hybrid. Following nuclear import, the integrase
CC catalyzes the insertion of the linear, double-stranded viral DNA
CC into the host cell chromosome. Endogenous Pol proteins may have
CC kept, lost or modified their original function during evolution
CC (By similarity).
CC -I- SUBUNIT: Homodimer (By similarity).
CC -I- DOMAIN: The LPQG and YXDD motifs are catalytically important and
CC conserved among many retroviruses (By similarity).
CC -I- SIMILARITY: Contains 1 reverse transcriptase domain.

CC -|- FUNCTION: Site-specific tyrosine recombinase, which acts by
catalyzing the cutting and rejoining of the recombining DNA
molecules. The xerC-xerD complex is essential to convert dimers of
the bacterial chromosome into monomers to permit their segregation
at cell division. It also contributes to the segregational
stability of plasmids (By similarity).
CC -|- SUBUNIT: Forms a cyclic heterotetrameric complex composed of two
molecules of xerC and two molecules of xerD (By similarity).
CC -|- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
CC -|- SIMILARITY: Belongs to the "phage" integrase family. XerC type 1
subfamily.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Thrombopoietin receptor-binding/activating peptide(s) and peptide
PT mimetic(s) - useful in treatment of haematological disorders, esp.
PT thrombocytopenia resulting from chemotherapy, etc.
XX
PS Disclosure; Page 26; 106pp; English.

CC The present sequence is a peptide which binds to thrombopoietin (TPO)
CC receptor (TR). The compound can be used for treating patients suffering
CC from haematological disorders and thrombocytopenia resulting from
CC chemotherapy, radiation therapy or bone marrow transfusions. The peptide
CC may also be used to maintain the proliferation and growth of TPO-
CC dependent cell lines and for use in biological research, for detecting
CC TPO receptors on living cells

PT KW with peptides and peptide mimetics attached to hydrophilic polymers.

XX KW

PS KW Disclosure; Col 20; 128pp; English.

XX KW

CC KW Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that

CC KW bind to and activate the human thrombopoietin receptor (TPO-R). Methods

CC KW of activating thrombopoietin receptors in cells comprise contacting the

CC KW cells with effective amounts of peptides and peptide mimetics attached to

CC KW hydrophilic polymers. The methods are used to treat thrombocytopenia such

CC KW as that due to chemotherapy, radiation therapy or bone-marrow

CC KW transplantation and to prevent thrombocytopenia in patients at risk.The

CC KW sequences are used to treat and prevent haematological disorders

CC KW including thrombocytopenia and platelet disorders. They are used in vitro

CC KW as unique tools for understanding the biological role of thrombopoietin

CC KW (TPO) and to develop other compounds that bind to and activate the TPO

CC KW receptor. The peptides can be used to detect TPO receptors on living

CC KW cells and fixed cells, in biological fluids, in tissue homogenates, and

CC KW in purified or natural biological materials. They may also be used for in

CC KW situ staining, fluorescence-activated cell sorting, Western blotting and

CC KW enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can

CC KW be used for in vitro expansion of megakaryocytes and their committed

CC KW progenitors alone or in conjunction with additional cytokines

CC The present invention describes a vehicle-peptide molecule (I) or its

CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,

CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,

CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and

CC neuroprotective activities. (I) can be used as a therapeutic or

CC prophylactic agent as well as for screening purposes. (I) is useful for

CC diagnosing diseases characterised by dysfunction of their associated

CC protein of interest, for identifying normal or abnormal proteins of

CC interest, as a part of diagnostic kit to detect the presence of their

CC proteins of interest in a biological sample. Additionally, (I) is useful

CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,

CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,

CC infertility, and neurological degenerative diseases. (I), comprising EPO-

CC mimetic compounds are useful for treating disorders characterised by low

CC red blood cell levels such as anaemia. The TPO-mimetic comprising

CC compounds are useful for treating conditions that involve an existing

CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet

CC deficiency, such as thrombocytopenia, aplastic anaemia, metastatic

CC tumour which result in thrombocytopenia, systemic lupus erythematosus,

CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777

PT New CDR mimetibody comprising a portion of a heavy or light chain
PT variable region comprising human framework or ligand binding region,
PT useful for preparing a composition for treating e.g., immune,
PT cardiovascular or neurologic disease.
XX
PS Disclosure; SEQ ID NO 501; 97pp; English.
XX
CC This invention relates to novel mammalian CDR mimetibodies, specific
CC portions or variants thereof. Specifically, it refers to an antibody
CC fragment where a protein has been inserted into, or replaces a portion
CC of, one or more CDR regions, such that each CDR mimetibody comprises at
CC least one portion of a heavy chain or light chain variable region, which
CC itself comprises at least one human framework region and at least one
CC ligand binding region (LBR). The present invention describes human
CC mimetibodies, including modified immunoglobulins and cleavage products
CC that can be useful in gene therapy and the generation of transgenic
CC plants and animals. Furthermore, the CDR mimetibody is useful for
CC preparing compositions for modulating, treating or reducing the symptoms
CC of immune, cardiovascular, infectious, malignant and/ or neurologic
CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC peptide sequence is a TPO mimetic peptide sequence used to make a
CC mimetibody of the invention.

XX
PS Claim 1c; Page 99; 323pp; English.
XX
CC The invention relates to 24 novel human proteins designated NOV1-NOV14
CC (ABB09501-ABB09524), collectively referred to as NOVX proteins, and
CC nucleic acids encoding them (ABQ93879-ABQ93902). NOVX proteins, and
CC nucleotides are useful in the treatment, diagnosis or prevention of NOVX-
CC associated disorders or in the manufacture of a medicament for treating
CC such disorders, with specific applications described for each of the 24
CC NOVX proteins, based on their homology to known proteins. Various
CC disorders are associated with NOVX proteins including neurological
CC disorders (e.g., Alzheimer's, Huntington's and Parkinson's diseases),
CC pain, behavioural disorders, addiction, tuberosus sclerosis, cancers
CC (e.g., colorectal cancer, leukaemia and osteosarcoma), immune disorders
CC (e.g., allergies and autoimmune diseases), myasthenia gravis, asthma,
CC various forms of arthritis, diabetes, thyroiditis, cardiovascular disease
CC (e.g., hypertension), reproductive disorders, endometriosis,
CC incontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis,
CC cirrhosis, glomerular endothe liosis, polycystic kidney disease, endocrine
CC disorders, obesity, bacterial infections and particularly cardiomyopathy,
CC atherosclerosis, cell signal processing-related disorders and disorders
CC of metabolic pathway regulation. NOVX nucleic acids and polypeptides may
CC be used to identify cellular receptors or downstream effectors which
CC binds to a NOVX protein, and are also useful as targets for the
CC identification of small molecules that modulate or inhibit processes such
CC as neurogenesis, cell differentiation, cell motility, cellular
CC proliferation, haematopoiesis, wound healing and angiogenesis. NOVX
CC nucleic acid sequences can be used to identify a cell or tissue type and
CC are useful as a source of primers or probes for forensic biology and for
CC identifying and cloning NOVX homologues in other cell types. Cells
CC comprising NOVX nucleic acids are useful for producing non-human
CC transgenic animals which are useful for studying the function and
CC activity of NOVX proteins and for identifying and evaluating modulators
CC of NOVX activity. The present sequence represents the RNase-like protein
CC NOV8. The gene encoding NOV8 is located on chromosome 14

XX Human genome-derived single exon nucleic acid probes useful for analyzing
PT gene expression in human placenta.
XX Claim 27; SEQ ID NO 29368; 654pp; English.
XX The present invention relates to single exon nucleic acid probes (SENP;
CC see AAI31315-AAI57546). The present sequence is a peptide encoded by one
CC such probe. The probes are useful for producing a microarray for
CC predicting, measuring and displaying gene expression in samples derived
CC from human placenta. The probes are useful for antenatal diagnosis of
CC human genetic disorders

DR Novel AFP polypeptides and polynucleotides, useful for diagnostic and
XX therapeutic purposes, in cancer therapy and for screening modulator
PT compounds.
PT Claim 2; Page 213-214; 220pp; English.
PS

XX The invention relates to novel human AFP proteins (not defined) and the
CC nucleic acids that encode them. AFP proteins are useful as standards in
CC assays of protein and protein inhibitors in both clinical and research
CC settings, as protein and amino acid supplements, including hydrolysates.
CC The nucleic acids are useful for radiation hybrid mapping. Secretary
CC fusion proteins of AFP are useful in cancer therapy, for enhancing in
CC vitro cytotoxicity, for enhancing in vivo killing of target tissues, and
CC for targeted cells or tissue inhibition or ablation. Anti-AFP antibodies
CC are useful for isolating target polypeptides by affinity purification, in
CC diagnostic assays for determining circulating or localised levels of
CC target polypeptides, for tissue typing, for cell sorting, for screening
CC expression libraries, for generating anti-idiotypic antibodies, and as
CC neutralising antibodies or as antagonists to block protein activity in
CC vitro and in vivo. AFP proteins and nucleic acids may be used to diagnose
CC or treat (e.g. by gene therapy) diseases associated with the malfunction
CC of the AFP e.g. AFP166924 and Marfan's syndrome, AFP576853/AFP39158 and
CC thrombocytopaenia, leukaemia, porphyria, Gilles De La Tourette's
CC syndrome, AFP652829 and squamous cell carcinoma, diabetes mellitus,
CC Grave's disease, AFP664311 and colon cancer, AFP253034 and Alzheimer's
CC disease and AFP686580 and epiphyseal dysplasia. Many more examples of
CC disease are given in the specification. The present sequence represents
CC an AFP of the invention

PT Novel nucleic acids encoding PRO polypeptides, used to diagnose the
PT presence of tumors, such as prostate and breast tumors, in mammals and to
PT screen for modulators of the compounds.
XX
PS Claim 11; Fig 124; 774pp; English.
XX
CC Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention.
CC The PRO polypeptides and their associated nucleic acids can be used to
CC detect the presence of a tumour in a mammal by comparing the level of
CC expression of a PRO polypeptide in a test sample of cells from the animal
CC and a control sample of normal cells, whereby a higher level of
CC expression in the test sample indicates the presence of a tumour in the
CC mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats
CC and rabbits but are preferably human. The polypeptides can be used to
CC stimulate tumour necrosis factor (TNF) alpha release from human blood,
CC when contacted with it. A specific polypeptide can be used to stimulate
CC the proliferation or differentiation of chondrocyte cells. The PRO
CC proteins can be used to determine the presence of tumours and also
CC susceptibility to tumour development, particularly adrenal, lung, colon,
CC breast, prostate, rectal, cervical, or liver tumours, in mammalian
CC subjects. The oligonucleotide probes specific for the PRO nucleic acids
CC can be used for genetic analysis of individuals with genetic disorders

PT proteins, useful in gene therapy and vaccination against a variety of
PT diseases, and for diagnosis of those diseases.
XX
PS Claim 21; Page 808; 921pp; English.
XX
CC The invention relates to full length GENSET human nucleic acids encoding
CC potentially secreted proteins. The nucleic acids and the polypeptides
CC they encode may be used in the prevention, treatment and diagnosis of
CC diseases associated with inappropriate GENSET gene expression. For
CC example, they be used to treat disorders associated with decreased GENSET
CC gene expression by rectifying mutations or deletions in a patient's
CC genome that affect the activity of GENSET or by supplementing the
CC patients own production of GENSET polypeptides. Conversely, antisense
CC nucleic acid molecules may be administered to down regulate GENSET
CC expression by binding with the cells' own genes and preventing their
CC expression. The sense and antisense nucleic acids may also be used as DNA
CC probes in diagnostic assays to detect and quantitate the presence of
CC similar nucleic acid sequences in samples, and hence to determine which
CC patients may be in need of restorative therapy. The GENSET polypeptides
CC may be used as antigens in the production of antibodies and in assays to
CC identify modulators (agonists and antagonists) of GENSET polypeptide
CC expression and activity. The present sequence is a GENSET polypeptide of
CC the invention

CC The invention comprises the amino acid and coding sequences of human
CC secreted proteins (SECP). The SECP DNA and amino acid sequences of the
CC invention are useful for treating/preventing disorders associated with
CC decreased or elevated expression of SECP. The SECP DNA and protein
CC sequences are specifically useful for treating/preventing (i.e. gene
CC therapy and protein therapy): immune system disorders (e.g. AIDS, thymic
CC hypoplasia, anaemia, asthma or Crohn's disease); neurological disorders
CC (e.g. epilepsy, Huntington's disease, dementia or Parkinson's disease);
CC developmental disorders (e.g. Down's syndrome); and cell proliferative
CC disorders (e.g. cancer). The proteins ABP43477 - ABP43543 represent the
CC human secreted proteins (SECP) of the invention

Three hundred and five nucleic acids encoding PRO polypeptides, useful
for the manufacture of a medicament for diagnosing or treating tumor.
Claim 11; Fig 588; 707pp; English.
The invention relates to human PRO polypeptides (secreted and
transmembrane polypeptides) and the PRO polynucleotides encoding them.
The invention also relates to a method for stimulating the release of
tumour necrosis factor alpha (TNF-alpha) from human blood by contacting
the blood with a sequence of the invention, a method for stimulating the
proliferation or differentiation of chondrocyte cells by contacting the
cells with a PRO polypeptide and a method for detecting the presence of a
tumour in a mammal. The polypeptides and polynucleotides are useful for
the manufacture of a medicament for diagnosing or treating a tumour in a
mammal. Sequences ABU85578-ABU85882 represent human PRO polypeptides of
the invention. Note: The sequence data for this patent is also available
in electronic format from USPTO at seqdata.uspto.gov/sequence.html

PT Three hundred and five nucleic acids encoding PRO polypeptides, useful in
PT gene therapy, chromosome identification, tissue typing, and for detecting
PT the presence of tumor in a mammal.
XX
PS Claim 11; Fig 588; 707pp; English.
XX
CC The invention relates to three hundred and five nucleic acids encoding
CC PRO polypeptides (secreted and transmembrane), sequences 80% identical to
CC them, or encoding a PRO polypeptide lacking its associated signal peptide
CC or an extracellular domain of the PRO polypeptide, with or lacking its
CC associated signal peptide. Also included are the encoded PRO proteins,
CC PRO expression vectors, host cells transformed with the vector (used to
CC produce PRO proteins), a chimaeric molecule comprising the PRO
CC polypeptide fused to a heterologous amino acid sequence, an anti-PRO
CC antibody, a method for stimulating the release of tumor necrosis factor
CC alpha (TNF-alpha) from human blood (by contacting the blood with PRO1079,
CC PRO827, PRO791, PRO1131, PRO1316, PRO1183, PRO1343, PRO1760, PRO1567 or
CC PRO4333), a method for stimulating the proliferation or differentiation
CC of chondrocyte cells by contacting the cells with a PRO6029 polypeptide,
CC a method for detecting the presence of tumour in a mammal and an
CC oligonucleotide probe derived from any of the nucleotide sequences cited
CC above. The PRO polypeptide or anti-PRO antibody is useful for preparing a
CC medicament for treating a condition that is responsive to the PRO
CC polypeptide or anti-PRO antibody. The PRO nucleotide sequences are useful
CC as hybridisation probes in chromosome and gene mapping, or in generating
CC antisense RNA and DNA. PRO nucleic acids are also useful in preparing PRO
CC polypeptides, in assays to identify other proteins or molecules involved
CC in a binding reaction, to generate transgenic animals or knockout
CC animals, which in turn are useful in the development and screening of
CC therapeutically useful reagents, for chromosome identification, and
CC tissue typing. The PRO polypeptides and nucleic acid molecules are also
CC useful for detecting the presence of a tumour in a mammal, stimulating the
CC proliferation or differentiation of chondrocyte cells, stimulating the
CC release of tumour necrosis factor-alpha from human blood, in gene
CC therapy, or as molecular weight markers for protein electrophoresis
CC purposes. The anti-PRO antibodies may be used in diagnostic assays for
CC PRO, or for the affinity purification of PRO from recombinant cell
CC culture or natural sources. The present sequence represents a PRO protein

PT New secreted and transmembrane PRO polypeptides and nucleic acids, useful
PT in gene therapy, in chromosome and gene mapping, as chromosome markers,
PT in tissue typing, and in chromosome identification.

XX Claim 11; Fig 588; 706pp; English.

CC The invention discloses human nucleic acids encoding secreted and
CC transmembrane (PRO) polypeptides. Also disclosed is an antibody that
CC specifically binds to the PRO polypeptide, a method for stimulating the
CC release of tumour necrosis factor alpha (TNF-alpha) from human blood by
CC contacting the blood a PRO polypeptide, a method for stimulating the
CC proliferation or differentiation of chondrocyte cells by contacting the
CC cells with a PRO polypeptide, a method for detecting the presence of a
CC tumour in a mammal and an oligonucleotide probe derived from any of the
CC PRO nucleotide sequences. The nucleotide sequences are useful as probes,
CC in chromosome and gene mapping, in generating antisense RNA and DNA, in
CC preparing PRO polypeptides by recombinant techniques and in gene therapy
CC (e.g. for replacement of defective gene). The PRO polypeptides are useful
CC as molecular weight markers for protein electrophoresis purposes, for
CC chromosome identification, as chromosome markers, as therapeutic agents,
CC for stimulating the release of TNF-alpha from human blood, for
CC stimulating the proliferation or differentiation of chondrocytes and
CC detecting the presence of a tumour. The PRO polypeptides and nucleic
CC acids may also be used diagnostically for tissue typing. The sequences
CC presented in ABU67406-ABU67710 are the PRO polypeptides of the invention

Three hundred and five nucleic acids encoding secreted and transmembrane
PRO polypeptides, useful for the diagnosis, prevention and/or treatment
of tumors, such as adrenal, lung, colon, breast, prostate, rectal,
cervical or liver tumors.

Claim 11; Fig 588; 708pp; English.

The invention relates to three hundred and five nucleic acids encoding
PRO polypeptides (secreted and transmembrane). Methods and compositions
of the present invention are useful for the diagnosis, prevention and/or
treatment of tumors, such as adrenal, lung, colon, breast, prostate,
rectal, cervical or liver tumours. The PRO polypeptides are also useful
as molecular weight markers, or for chromosome identification. The PRO
genes are useful as hybridisation probes, or for screening libraries of

CC human cDNA, genomic DNA or mRNA. The PRO genes may also be used in gene
CC therapy, particularly for replacing a defective gene. The present
CC sequence represents a human PRO polypeptide of the invention

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RL J. Virol. 77:12523-12534 (2003).
CC -I- FUNCTION: Early post-infection, the reverse transcriptase converts the viral RNA genome into double-stranded viral DNA. The RNase H domain of the reverse transcriptase performs two functions. It degrades the RNA template and specifically removes the RNA primer from the RNA/DNA hybrid. Following nuclear import, the integrase catalyzes the insertion of the linear, double-stranded viral DNA into the host cell chromosome. Endogenous Pol proteins may have kept, lost or modified their original function during evolution (By similarity).
CC -I- DOMAIN: The LPQG and YXDD motifs are catalytically important and conserved among many retroviruses (By similarity).
CC -I- SIMILARITY: Contains 1 reverse transcriptase domain.

RL Submitted (JUL-2005) to the EMBL/GenBank/DBJ databases.

CC -1- FUNCTION: Early post-infection, the reverse transcriptase converts

CC the viral RNA genome into double-stranded viral DNA. The RNase H

CC domain of the reverse transcriptase performs two functions. It

CC degrades the RNA template and specifically removes the RNA primer

CC from the RNA/DNA hybrid. Following nuclear import, the integrase

CC catalyzes the insertion of the linear, double-stranded viral DNA

CC into the host cell chromosome. Endogenous Pol proteins may have

CC kept, lost or modified their original function during evolution

CC (By similarity).

CC -1- SUBUNIT: Homodimer (By similarity).

CC -1- DOMAIN: The LPQG and YXDD motifs are catalytically important and

CC conserved among many retroviruses (By similarity).

CC -1- SIMILARITY: Contains 1 reverse transcriptase domain.

CC -1- FUNCTION: During replicative cycle of retroviruses, the reverse-
transcribed viral DNA is integrated into the host chromosome by
the viral integrase enzyme. RNase H activity is associated with
the reverse transcriptase.
CC -1- CATALYTIC ACTIVITY: Endonucleolytic cleavage to 5'-
phosphomonoester.
CC -1- CATALYTIC ACTIVITY: Deoxynucleoside triphosphate + DNA(n) =
diphosphate + DNA(n+1).
CC -1- CATALYTIC ACTIVITY: Endopeptidase for which the P1 residue is
preferably hydrophobic.
CC -1- PTM: Cleavage sites that yield the mature proteins remain to be
determined.
CC -1- SIMILARITY: Belongs to the retroviruses Pol polyprotein family.
CC -1- SIMILARITY: Contains 1 integrase catalytic domain.
CC -1- SIMILARITY: Contains 1 integrase-type DNA-binding domain.
CC -1- SIMILARITY: Contains 1 integrase-type zinc finger.
CC -1- SIMILARITY: Contains 1 peptidase A2 domain.
CC -1- SIMILARITY: Contains 1 reverse transcriptase domain.
CC -1- SIMILARITY: Contains 1 RNase H domain.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX Thrombopoietin receptor-binding/activating peptide(s) and peptide
PT mimetic(s) - useful in treatment of haematological disorders, esp.
PT thrombocytopenia resulting from chemotherapy, etc.
XX
PS Claim 18; Page 89; 106pp; English.
XX
CC The present sequence is a compound which binds to thrombopoietin (TPO)
CC receptor (TR). It has a molecular weight of < 8000 Da, and a binding
CC affinity to TR as expressed by an IC50 of no more than about 100 mum. The
CC compound (especially if modified, see features table) can be used for
CC treating patients suffering from haematological disorders and
CC thrombocytopenia resulting from chemotherapy, radiation therapy or bone
CC marrow transfusions. The peptide may also be used to maintain the
CC proliferation and growth of TPO-dependent cell lines and for use in
CC biological research, for detecting TPO receptors on living cells

DR
XX Activating thrombopoietin receptors in cells, used to treat
XX thrombocytopenia and hematological disorders, comprises contacting cells
PT with peptides and peptide mimetics attached to hydrophilic polymers.
PT
XX Disclosure; Col 67-68; 128pp; English.
PS
XX Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that
CC bind to and activate the human thrombopoietin receptor (TPO-R). Methods
CC of activating thrombopoietin receptors in cells comprise contacting the
CC cells with effective amounts of peptides and peptide mimetics attached to
CC hydrophilic polymers. The methods are used to treat thrombocytopenia such
CC as that due to chemotherapy, radiation therapy or bone-marrow
CC transplantation and to prevent thrombocytopenia in patients at risk. The
CC sequences are used to treat and prevent haematological disorders
CC including thrombocytopenia and platelet disorders. They are used in vitro
CC as unique tools for understanding the biological role of thrombopoietin
CC (TPO) and to develop other compounds that bind to and activate the TPO
CC receptor. The peptides can be used to detect TPO receptors on living
CC cells and fixed cells, in biological fluids, in tissue homogenates, and
CC in purified or natural biological materials. They may also be used for in
CC situ staining, fluorescence-activated cell sorting, Western blotting and
CC enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can
CC be used for in vitro expansion of megakaryocytes and their committed
CC progenitors alone or in conjunction with additional cytokines

PT diabetic retinopathy, obesity, sleep disorders and infertility.
XX
XX Claim 39; Page 44; 176pp; English.
PS
XX The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antirheumatic, antiarthritis, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal protease of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopenia, aplastic anaemia, metastatic
CC tumour which result in thrombocytopenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777
CC represent amino acid and nucleic acid sequences used in the
CC exemplification of the present invention

XX PT New CDR mimetibody comprising a portion of a heavy or light chain
PT variable region comprising human framework or ligand binding region,
PT useful for preparing a composition for treating e.g., immune,
PT cardiovascular or neurologic disease.

PS Disclosure; SEQ ID NO 516; 97pp; English.

XX CC This invention relates to novel mammalian CDR mimetibodies, specific
CC portions or variants thereof. Specifically, it refers to an antibody
CC fragment where a protein has been inserted into, or replaces a portion
CC of, one or more CDR regions, such that each CDR mimetibody comprises at
CC least one portion of a heavy chain or light chain variable region, which
CC itself comprises at least one human framework region and at least one
CC ligand binding region (LBR). The present invention describes human
CC mimetibodies, including modified immunoglobulins and cleavage products
CC that can be useful in gene therapy and the generation of transgenic
CC plants and animals. Furthermore, the CDR mimetibody is useful for
CC preparing compositions for modulating, treating or reducing the symptoms
CC of immune, cardiovascular, infectious, malignant and/or neurologic
CC diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
CC cardiant, antimicrobial, cytostatic and neuroprotective activities. This
CC peptide sequence is a TPO mimetic peptide sequence used to make a
CC mimetibody of the invention.

XX PT New CH1-deleted mimetibody polypeptides and nucleic acids, useful for
PT modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.

XX PS Claim 2; SEQ ID NO 516; 129pp; English.

XX CC This invention relates to CH1 deleted mimetibodies (and the DNA sequences
CC which encode them), compositions, methods and uses. The invention may be
CC useful for the development of compounds with an immunosuppressive,
CC cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
CC antibacterial, virucide or fungicide activity. In addition, the disclosed
CC sequences may prove useful for gene therapy. The CH1-deleted mimetibody
CC is useful for diagnosing or treating a disease condition in a cell,
CC tissue, organ or animal, specifically for modulating, treating,
CC alleviating, preventing the incidence or reducing the symptoms of an
CC immune, cardiovascular (for example arrhythmia, hypertension or heart
CC failure), or neurodegenerative (for example multiple sclerosis, dementia
CC or Alzheimer's disease) diseases or disorders, anaemia, cancerous
CC conditions, or infectious diseases (for example bacterial, viral or
CC fungal infection). The present sequence is that of a peptide which may be
CC used during the creation of a mimetibody of the invention.

Thrombopoietin receptor-binding/activating peptide(s) and peptide
mimetic(s) - useful in treatment of haematological disorders, esp.
thrombocytopenia resulting from chemotherapy, etc.

Disclosure; Page 26; 106pp; English.

The present sequence is a peptide which binds to thrombopoietin (TPO)
receptor (TR). The compound can be used for treating patients suffering
from haematological disorders and thrombocytopenia resulting from
chemotherapy, radiation therapy or bone marrow transfusions. The peptide
may also be used to maintain the proliferation and growth of TPO-
dependent cell lines and for use in biological research, for detecting
TPO receptors on living cells

XX Activating thrombopoietin receptors in cells, used to treat
PT thrombocytopenia and hematological disorders, comprises contacting cells
PT with peptides and peptide mimetics attached to hydrophilic polymers.
XX
PS Disclosure; Col 20; 128pp; English.
XX
CC Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that
CC bind to and activate the human thrombopoietin receptor (TPO-R). Methods
CC of activating thrombopoietin receptors in cells comprise contacting the
CC cells with effective amounts of peptides and peptide mimetics attached to
CC hydrophilic polymers. The methods are used to treat thrombocytopenia such
CC as that due to chemotherapy, radiation therapy or bone-marrow
CC transplantation and to prevent thrombocytopenia in patients at risk. The
CC sequences are used to treat and prevent hematological disorders
CC including thrombocytopenia and platelet disorders. They are used in vitro
CC as unique tools for understanding the biological role of thrombopoietin
CC (TPO) and to develop other compounds that bind to and activate the TPO
CC receptor. The peptides can be used to detect TPO receptors on living
CC cells and fixed cells, in biological fluids, in tissue homogenates, and
CC in purified or natural biological materials. They may also be used for in
CC situ staining, fluorescence-activated cell sorting, Western blotting and
CC enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can
CC be used for in vitro expansion of megakaryocytes and their committed
CC progenitors alone or in conjunction with additional cytokines

XX
PS Claim 20; Fig 5; 113pp; English.
XX
CC The present invention describes an immunoglobulin molecule or its fragment
CC (i) comprising a region where amino acid residues corresponding to at
CC least a portion of the complementary determining region (CDR) are
CC replaced or fused with biologically active peptides e.g. a peptide
CC mimetic such as an erythropoietin (EPO) or thrombopoietin (TPO) mimetic,
CC that is flanked with proline at its carboxy terminus. (I) has
CC antianaemic, haemostatic and nephrotropic activities, and can be used as
CC a stimulator of proliferation, differentiation and maturation of
CC haematopoietic cells, and a stimulator of haematopoiesis. (I) is useful
CC for stimulating proliferation, differentiation or growth of
CC promegakaryocytes or megakaryocytes, where (I) is contacted with
CC promegakaryocytes or megakaryocytes, which results in increased platelet
CC production. (I) with a region where amino acid residues corresponding to
CC a portion of CDR is replaced with an EPO mimetic, or which has one or
CC more of its CDRs fused to an EPO mimetic, is useful for increasing the
CC production of red blood cells, where (I) is contacted with haematopoietic
CC stem cells or their progenitors. (I) is useful for diagnostics or
CC therapeutics, in cell isolation strategies, and for treating patients
CC suffering from deficiency in cell populations caused by disease,
CC disorders or treatments related to the suppression of haematopoiesis.

XX PT Activating thrombopoietin receptors in cells, used to treat
PT thrombocytopenia and hematological disorders, comprises contacting cells
PT with peptides and peptide mimetics attached to hydrophilic polymers.
XX PS
PS Disclosure; Col 147; 128pp; English.
XX
CC Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that
CC bind to and activate the human thrombopoietin receptor (TPO-R) . Methods
CC of activating thrombopoietin receptors in cells comprise contacting the
CC cells with effective amounts of peptides and peptide mimetics attached to
CC hydrophilic polymers. The methods are used to treat thrombocytopenia such
CC as that due to chemotherapy, radiation therapy or bone-marrow
CC transplantation and to prevent thrombocytopenia in patients at risk.The
CC sequences are used to treat and prevent haematological disorders
CC including thrombocytopenia and platelet disorders. They are used in vitro
CC as unique tools for understanding the biological role of thrombopoietin
CC (TPO) and to develop other compounds that bind to and activate the TPO
CC receptor. The peptides can be used to detect TPO receptors on living
CC cells and fixed cells, in biological fluids, in tissue homogenates, and
CC in purified or natural biological materials. They may also be used for in
CC situ staining, fluorescence-activated cell sorting, Western blotting and
CC enzyme-linked immunosorbent assay (ELISA). In addition, the peptides can
CC be used for in vitro expansion of megakaryocytes and their committed
CC progenitors alone or in conjunction with additional cytokines

PT Novel composition of matter comprising an Fc domain and pharmacologically
PT active peptides, useful for treating cancer and autoimmune diseases.
XX
PS Claim 19; Page 222; 608pp; English.
XX
CC The present invention describes composition of matter (I) comprising an
CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is:
CC (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each
CC independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-
CC (L2)d-P2-(L3)e-P^3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2,
CC P3, and P4 = are each independently sequences of pharmacologically active
CC peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b,
CC c, d, e, and f = are each independently 0 or 1, provided that at least 1
CC of a and b is 1. The composition can have cytostatic, antiasthmatic,
CC thrombolytic and immunosuppressive activities. DNAs, vectors and host
CC cells from the present invention can be used for producing pharmaceutical
CC compositions. The compositions are useful for treating cancer, asthma,
CC thrombosis, or autoimmune diseases. The use of an Fc domain (rather than
CC a Fab domain) can provide a longer half-life or incorporate functions
CC such as Fc receptor binding, protein A binding, complement fixation, and
CC possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to
CC AAB18003 represent nucleotide and amino acid sequences used in the
CC exemplification of the present invention

XX Novel vehicle-peptide molecule or its multimers useful for treating
PT inflammatory and autoimmune diseases, cancer, rheumatoid arthritis,
PT diabetic retinopathy, obesity, sleep disorders and infertility.

XX Claim 39; Page 44; 176pp; English.

XX The present invention describes a vehicle-peptide molecule (I) or its
CC multimers. (I) can have antiinflammatory, antitumour, immunosuppressive,
CC cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological,
CC antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
CC neuroprotective activities. (I) can be used as a therapeutic or
CC prophylactic agent as well as for screening purposes. (I) is useful for
CC diagnosing diseases characterised by dysfunction of their associated
CC protein of interest, for identifying normal or abnormal proteins of
CC interest, as a part of diagnostic kit to detect the presence of their
CC proteins of interest in a biological sample. Additionally, (I) is useful
CC for treating inflammatory and autoimmune diseases, tumour growth, cancer,
CC rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders,
CC infertility, and neurological degenerative diseases. (I), comprising EPO-
CC mimetic compounds are useful for treating disorders characterised by low
CC red blood cell levels such as anaemia. The TPO-mimetic comprising
CC compounds are useful for treating conditions that involve an existing
CC megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet
CC deficiency, such as thrombocytopenia, aplastic anaemia, metastatic

CC tumour which result in thrombocytopaenia, systemic lupus erythematosus,
CC and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777
CC represent amino acid and nucleic acid sequences used in the
CC exemplification of the present invention

PT New CDR mimetibody comprising a portion of a heavy or light chain
PT variable region comprising human framework or ligand binding region,
PT useful for preparing a composition for treating e.g., immune,
PT cardiovascular or neurologic disease.
XX
PS Disclosure; SEQ ID NO 518; 97pp; English.
XX

This invention relates to novel mammalian CDR mimetibodies, specific
portions or variants thereof. Specifically, it refers to an antibody
fragment where a protein has been inserted into, or replaces a portion
of, one or more CDR regions, such that each CDR mimetibody comprises at
least one portion of a heavy chain or light chain variable region, which
itself comprises at least one human framework region and at least one
ligand binding region (LBR). The present invention describes human
mimetibodies, including modified immunoglobulins and cleavage products
that can be useful in gene therapy and the generation of transgenic
plants and animals. Furthermore, the CDR mimetibody is useful for
preparing compositions for modulating, treating or reducing the symptoms
of immune, cardiovascular, infectious, malignant and/ or neurologic
diseases, as well as anaemia. Accordingly, they exhibit immunomodulator,
cardiant, antimicrobial, cytostatic and neuroprotective activities. This
peptide sequence is a TPO mimetic peptide sequence used to make a
mimetibody of the invention.

PT New CHI-deleted mimetibody polypeptides and nucleic acids, useful for
PT modulating, treating, alleviating, preventing an immune, cardiovascular,
PT or neurodegenerative disease or disorder, anemia, cancer, or infectious
PT diseases.
XX
PS Claim 2; SEQ ID NO 518; 129pp; English.
XX

This invention relates to CHI deleted mimetibodies (and the DNA sequences
which encode them), compositions, methods and uses. The invention may be
useful for the development of compounds with an immunosuppressive,
cardiovascular, cardiant, hypotensive, neuroprotective, nootropic,
antibacterial, virucide or fungicide activity. In addition, the disclosed
sequences may prove useful for gene therapy. The CHI-deleted mimetibody
is useful for diagnosing or treating a disease condition in a cell,
tissue, organ or animal, specifically for modulating, treating,
alleviating, preventing the incidence or reducing the symptoms of an
immune, cardiovascular (for example arrhythmia, hypertension or heart
failure), or neurodegenerative (for example multiple sclerosis, dementia
or Alzheimer's disease) diseases or disorders, anaemia, cancerous
conditions, or infectious diseases (for example bacterial, viral or
fungal infection). The present sequence is that of a peptide which may be
used during the creation of a mimetibody of the invention.

PS New immunoglobulin molecule comprises a region where amino acid residues
PT corresponding to a portion of complementarity determining region (CDR) is
PT replaced with a peptide mimetic, useful for treating, e.g. HIV-infected
PT patients.
XX
PS Example 8; SEQ ID NO 152; 139pp; English.
XX
CC The invention describes an immunoglobulin molecule or its fragment
CC comprising: a region where amino acid residues corresponding to at least
CC a portion of two CDRs are replaced with a peptide mimetic selected from
CC an EPO mimetic or a TPO mimetic; or a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced by a peptide
CC mimetic including SEQ ID NO. 126 (not defined in the specification),
CC where X at each occurrence represents any amino acid. Also described are:
CC a nucleic acid encoding an immunoglobulin molecule or its fragment; an
CC expression vector comprising the nucleic acid of (1); a host cell
CC transformed with the expression vector of (2); producing an
CC immunoglobulin molecule or its fragment; and a composition comprising the
CC immunoglobulin or its fragment and a pharmaceutical carrier. Also
CC disclosed are: engineering immunoglobulin molecules or fragments;
CC creation of a library of monoclonal antibodies; stimulating
CC proliferation, differentiation, or growth of megakaryocytes; and
CC activating a homodimeric receptor protein. The immunoglobulin molecules
CC are useful for treating HIV-infected patients, patients undergoing
CC chemotherapy, bone marrow transplant patients, stem cell transplant
CC patients, or patients suffering from myeloproliferative disorders. This
CC is the amino acid sequence of an agonist TPO mimetic peptide used to

CC replace a CDR in a rationally designed antibody.

PS Example 8; SEQ ID NO 152; 152pp; English.
XX
CC The invention relates to an immunoglobulin (Ig) molecule or its fragment
CC comprising a region where amino acid residues corresponding to at least a
CC portion of a complementarity determining regions (CDR) is replaced with a
CC peptide selected from human brain natriuretic protein (hBNP), hBNP
CC mimetics, glycogen phosphorylase (GLP)-1, GLP-1 mimetics, GLP-2, GLP-2
CC mimetics, exendin, exendin mimetics, glucagons, glucagon mimetics and
CC PACAP-38. Also included are a nucleic acid encoding the immunoglobulin
CC molecule, an expression vector comprising the nucleic acid, a host cell
CC transformed with the expression vector, producing an immunoglobulin
CC molecule (or its fragment, comprising culturing the host cell under
CC conditions suitable for expression of the immunoglobulin or its
CC fragment), a composition comprising an immunoglobulin (or its fragment)
CC and a pharmaceutically acceptable carrier, treating congestive heart
CC failure (comprising administering to the subject an immunoglobulin
CC molecule or fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with a peptide
CC selected from hBNP and hBNP mimetics), treating diabetes or obesity
CC (comprising administering to a subject an immunoglobulin molecule or its
CC fragment comprising a region where amino acid residues corresponding to
CC at least a portion of a CDR is replaced with a peptide selected from GLP-
CC 1, GLP-1 mimetics, GLP-2, GLP-2 mimetics, exendin, exendin mimetics,
CC glucagons, glucagon mimetics and PACAP-38), preserving/improving beta-
CC cell function (comprising administering to a subject an immunoglobulin

CC molecule or fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with GLP-1),
CC inducing endothelial-dependent relaxation of precontracted pulmonary
CC artery rings (comprising administering to a subject an immunoglobulin
CC molecule or fragment thereof comprising a region where amino acid
CC residues corresponding to at least a portion of a CDR is replaced with
CC GLP-1) and administering to a subject an immunoglobulin molecule or its
CC fragment (comprising a region where amino acid residues corresponding to
CC at least a portion of a complementarity determining regions (CDR) is
CC replaced with a thiazolidinedione derivative), regulating adiponectin
CC expression (comprising administering to a subject an immunoglobulin
CC molecule or its fragment comprising a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced with a
CC thiazolidinedione derivative). The immunoglobulin is an anti-tetanus
CC toxoid antibody (TT) where the heavy chain CDR2 and/or CDR3 are fully or
CC partially replaced with a peptide listed above or (as described in the
CC examples) a Thrombopoietin (TPO) mimetic , erythropoietin (EPO) mimetic
CC or ANP (atrial natriuretic peptide). The molecule, composition and
CC methods are useful for treating congestive heart failure, diabetes or
CC obesity. The present sequence is a TPO mimetic peptide (full length, core
CC or flanked by random amino acids) for inclusion in an immunoglobulin of
CC the invention.

PT New immunoglobulin molecule comprises a region where amino acid residues
PT corresponding to a portion of complementarity determining region (CDR) is
PT replaced with a peptide mimetic, useful for treating, e.g. HIV-infected
PT patients.
XX
PS Claim 148; SEQ ID NO 150; 139pp; English.
XX
CC The invention describes an immunoglobulin molecule or its fragment
CC comprising: a region where amino acid residues corresponding to at least
CC a portion of two CDRs are replaced with a peptide mimetic selected from
CC an EPO mimetic or a TPO mimetic; or a region where amino acid residues
CC corresponding to at least a portion of a CDR is replaced by a peptide
CC mimetic including SEQ ID NO. 126 (not defined in the specification),
CC where X at each occurrence represents any amino acid. Also described are:
CC a nucleic acid encoding an immunoglobulin molecule or its fragment; an
CC expression vector comprising the nucleic acid of (1); a host cell
CC transformed with the expression vector of (2); producing an
CC immunoglobulin molecule or its fragment; and a composition comprising the
CC immunoglobulin or its fragment and a pharmaceutical carrier. Also
CC disclosed are: engineering immunoglobulin molecules or fragments;

CC creation of a library of monoclonal antibodies; stimulating
CC proliferation, differentiation, or growth of megakaryocytes; and
CC activating a homodimeric receptor protein. The immunoglobulin molecules
CC are useful for treating HIV-infected patients, patients undergoing
CC chemotherapy, bone marrow transplant patients, stem cell transplant
CC patients, or patients suffering from myeloproliferative disorders. This
CC is the amino acid sequence of a variant of the anti-tetanus toxoid
CC antibody pAX116 heavy chain, CDR2 of which has been partially replaced
CC with residues of a TPO-mimetic peptide.
